The Anderson-Bedin CTE Correction

1) Study the trails behind WPs in the dark exposures

- WP of 10,000 DN
- 1st pixel ~ 100 DN, 1%
- 2nd pixel ~ 50 DN, 0.5%
- 3rd ~ 40 DN, 0.4%
- 15th ~ 10 DN, 0.1%
- 45th ~ 1 DN, 0.01%

Empirically model the trail profile:
- All WPs appear to have similar release profiles
- The brighter WPs have more flux in trails, but a smaller fraction of their flux in trails
