GTO 1178

Ram Pressure Stripping in ESO 137-001

Your program coordinator has been notified of your submission, and you will be contacted shortly to notify you whether or not your submission has been accepted. Submissions which have outstanding unexplained diagnostics or which do not meet their time allocations may not be accepted.

Submission File: 1178-JwstSubmission-008.aptx

Comments:

added "direction" keyword, negative is the only possible value.

4/8/2020. I have 12 hours of GTO time. George Rieke is donating 2.5 hours of his GTO time to this project. So this project is within the total of 14.5 hours.

For this submission I reduced the number of groups from 95 to 90 for all MRS exposures to get within the 14.5 hour limit.

Diagnostic Justification:

We understand the data volume warning. Whether this is actually a problem depends on the data volume generated by the science programs preceding and subsequent to this program as well as the schedule of the ground station passes. We have techniques that would allow us to reduce the data volume if we are requested to do so.
