## SUMMER SCHOOL:

*High Redshift Transients with JWST*

The inaugural STScI JWST Summer School will focus on High-Redshift Transients with JWST. Early career scientists, new JWST researchers, and researchers new to the field are encouraged to join. The school will last two weeks: the first week will focus on high-z transient science, featuring lectures relevant to the field; the second week will focus on observational and analytical techniques, where participants will learn to create a JWST program and analyze and exploit JWST high-z transient data.
