

### Cycle 10 Approved Programs

First Name	Last Name	Proposal T	Institution	Country	Science Category	Title
Nahum	Arav	AR	UC Davis	United States	AGN/Quasars	AGN outflows: Ionization Equilibrium and Abundances in Seyfert UV absorbers
John	Bahcall	GO	Institute for Advanced Study	United States	Hot Stars	Observing the Next Nearby Supernova
Jack	Baldwin	AR	Michigan State University	United States	AGN/Quasars	Probing the High Redshift Universe with Quasar Emission Lines
Bruce	Balick	GO	University of Washington	United States	ISM and Circumstellar Matter	Outflow Collimation in Bipolar Symbiotic Nebulae
John	Bally	GO	University of Colorado	United States	Star Formation	Are there Large Dust Grains in Orion's Proto-Planetary Disks?
Jill	Bechtold	GO	Steward Observatory	United States	Quasar Absorption Lines and IGM	Molecular Hydrogen in the Damped LyAlpha Absorber of Q1331+170
Jill	Bechtold	GO	Steward Observatory	United States	Quasar Absorption Lines and IGM	The Pattern of Heavy Element Abundances in a Damped LyAlpha Galaxy
Robert	Becker	GO	University of California, Davis	United States	Quasar Absorption Lines and IGM	Identifying Damped Lyman-alpha Galaxies at $z \sim 1$
James	Bell	GO	Cornell University	United States	Solar System	A Global Search for Alteration Minerals on Mars
G. Fritz	Benedict	AR	University of Texas at Austin	United States	Cold Stars	Calibrating the Optical Field Angle Distortions of FGS1r
G. Fritz	Benedict	GO	University of Texas	United States	Cold Stars	FGS Astrometry of the Extrasolar Planet of Epsilon Eridani
Philip	Bennett	GO	University of Colorado	United States	Cold Stars	Mapping the Chromosphere of the K Supergiant in the Eclipsing Binary 31 Cygni
Matthew	Bershady	GO	University of Wisconsin-Madison	United States	Galaxies	Galaxy Mass and the Fate of Luminous, Blue Compact Galaxies at $z \sim 0.6$
Francesco	Bertola	GO	Dipartimento di Astronomia, Universita di Padova	Italy	Galaxies	Accurate determination of the BH mass in early-type disk galaxies
Luciana	Bianchi	GO	The Johns Hopkins University	United States	ISM and Circumstellar Matter	The UV interstellar extinction in nearby galaxies: M33
John	Biretta	GO	Space Telescope Science Institute	United States	AGN/Quasars	Proper Motions in Extragalactic Optical Jets
William P.	Blair	GO	The Johns Hopkins University	United States	ISM and Circumstellar Matter	Transition from Non-radiative to Radiative Shocks in the Cygnus Loop
Torsten	Boeker	SNAP	Space Telescope Science Institute	United States	Galaxies	A Census of Nuclear Star Clusters in Late-Type Spiral Galaxies: II - Spectroscopy and Stellar Populations
Howard E.	Bond	AR	Space Telescope Science Institute	United States	Stellar Populations	Post-AGB Stars and the Population II Distance Ladder
Howard E.	Bond	GO	Space Telescope Science Institute	United States	Hot Stars	Sakurai's Novalike Object: Real-Time Monitoring of a Stellar Thermal Pulse
Howard E.	Bond	GO	Space Telescope Science Institute	United States	Hot Stars	Dynamical Masses of White Dwarfs from Resolved Sirius-Like Binaries
David V.	Bowen	SNAP	Princeton Observatory	United States	ISM and Circumstellar Matter	A SNAPshot Survey of Absorption Lines from High Velocity Clouds in the Milky Way
Joel	Bregman	GO	University of Michigan	United States	Galaxies	Ultraluminous X-Ray Sources and Intermediate Mass Black Holes
Michael	Brown	GO	Caltech	United States	Solar System	A Search for Kuiper Belt Object Satellites
Thomas M.	Brown	GO	Goddard Space Flight Center	United States	Stellar Populations	The Late Evolution of Low-Mass Stars: a Deep UV Color-Magnitude Diagram of M32
Thomas M.	Brown	GO	Goddard Space Flight Center	United States	Galaxies	Star Formation Triggers and Chemical Reprocessing in I Zw 18
Martin	Bureau	GO	Sterrewacht Leiden	The Netherlands	Galaxies	Black Holes and Bars: A Recipe for Making Bulges?
Nuria	Calvet	GO	Smithsonian Astrophysical Observatory	United States	Star Formation	Accretion in the planet-forming disks of the TW Hya association
Daniela	Calzetti	GO	Space Telescope Science Institute	United States	Galaxies	Calibrating Star Formation: The Impact of Environment
Andrew	Cameron	GO	University of St Andrews	United Kingdom	Cold Stars	The densely spotted photospheres of active cool stars

### Cycle 10 Approved Programs

First Name	Last Name	Proposal T	Institution	Country	Science Category	Title
Rupali	Chandar	AR	The Johns Hopkins University	United States	Stellar Populations	Are Young Globular Clusters Forming in Quiescent Spiral Galaxies?
Scott	Chapman	GO	Carnegie Observatories	United States	Galaxies	Using Optically Faint Radio Sources to Pinpoint Dusty Proto-galaxies
David	Charbonneau	GO	Harvard-Smithsonian Center for Astrophysics	United States	Star Formation	Direct Detection of an Extrasolar Planet in Reflected Light
Jane	Charlton	AR	The Pennsylvania State University	United States	ISM and Circumstellar Matter	Looking Out From the Galaxy
Andrew	Connolly	AR	University of Pittsburgh	United States	Galaxies	Galaxy Spectral Energy Distributions at High Redshift
James	Cordes	GO	Cornell University	United States	Hot Stars	Evolution of the Bow Shock in the Guitar Nebula
Romano	Corradi	GO	Isaac Newton Group of Telescopes	Spain	ISM and Circumstellar Matter	Expansion distances to the symbiotic Miras He 2-104 and He 2-147
Arlin	Crotts	AR	Columbia University	United States	Quasar Absorption Lines and IGM	Transverse Structure in the Lyman Alpha Forest and a Program to Measure the Cosmological Constant
Arlin	Crotts	GO	Columbia University	United States	Hot Stars	The UV Light Echo of Shock Breakout During SN 1987A
Dale	Cruikshank	GO	Ames Research Center	United States	Solar System	Composition of Saturn's rings, and its variation with location
Kris	Davidson	GO	University of Minnesota	United States	Hot Stars	Critical spectroscopic variations in Eta Carinae
Constantine	Deliyannis	GO	Indiana University, Department of Astronomy	United States	Cold Stars	Boron Constraints on Slow Mixing in Low Mass Stars
Constantine	Deliyannis	GO	Indiana University	United States	Cold Stars	Boron in G64-12: Higher Big Bang Lithium or Signature of the Nu-Process?
S. George	Djorgovski	SNAP	California Institute of Technology	United States	AGN/Quasars	A Snapshot Survey of the Optically Selected Type-2 Quasars
Andrew	Dolphin	AR	National Optical Astronomy Observatories	United States	Galaxies	Properties of Young Clusters in Spiral Galaxies
Laurent	Drissen	GO	Universite Laval	Canada	Hot Stars	Physical Parameters of the Erupting Luminous Blue Variable NGC 2363-V1
Philip	Dufton	GO	Queen's University of Belfast	United Kingdom	Hot Stars	The iron abundance in the Magellanic Clouds and Bridge
James	Dunlop	GO	University of Edinburgh	United Kingdom	AGN/Quasars	Measuring the masses of high-z quasar host galaxies
Harald	Ebeling	GO	Institute for Astronomy	United States	Cosmology	Measuring the mass distribution in the most distant, very X-ray luminous galaxy cluster known
Richard	Ellis	SNAP	California Institute of Technology	United States	Cosmology	Imaging the Host Galaxies of High Redshift Type Ia Supernovae
Debra	Elmegreen	AR	Vassar College	United States	Galaxies	Archival Study of Acoustic Nuclear Spirals in Galaxies
Thomas	Erben	GO	Max-Planck-Institut f. Astrophysik	Germany	Cosmology	Resolving the Puzzling Dark Mass Concentration in Abell 1942
Nancy Ramage	Evans	GO	Center for Astrophysics	United States	Cold Stars	Cepheid Masses: Y Car
Robin	Evans	AR	Gibbel Corporation	United States	Solar System	Asteroid Trails in the HST Archive II
Emilio	Falco	GO	Smithsonian Astrophysical Observatory	United States	Cosmology	HST Imaging of Gravitational Lenses
Paul D.	Feldman	GO	The Johns Hopkins University	United States	Solar System	Spectroscopic Imaging of the Atmosphere of Callisto
Henry	Ferguson	GO	Space Telescope Science Institute	United States	Galaxies	Investigating the Formation History of Spiral Galaxy Halos
Pierre	Ferruit	GO	CRAL -- Observatoire de Lyon	France	AGN/Quasars	Probing the structure of the shocks in the narrow line region of M 51
Andrew	Fruchter	GO	Space Telescope Science Institute	United States	Galaxies	The Origin and Physics of Gamma-Ray Bursts
Michael	Garcia	GO	Smithsonian Astrophysical Observatory	United States	Galaxies	Black Hole X-ray Transients and X-ray Binaries in M31

### Cycle 10 Approved Programs

First Name	Last Name	Proposal T	Institution	Country	Science Category	Title
Peter	Garnavich	SNAP	University of Notre Dame	United States	ISM and Circumstellar Matter	Light Echos and the Nature of Type Ia Supernovae
Donald	Garnett	GO	University of Arizona	United States	ISM and Circumstellar Matter	Giant H II Regions and the Connection with Starbursts and Diffuse Ionized Gas
Mike	Gladders	GO	University of Toronto	Canada	Cosmology	A New High-z Galaxy Cluster with Extraordinary Lensed Arcs From Multiple Sources
Carol	Grady	GO	Eureka Scientific	United States	Star Formation	T Tauri Star Coronagraphic Survey: A PMS Protoplanetary Disk Census
Michael	Gregg	SNAP	University of California, Davis	United States	Galaxies	A Next Generation Spectral Library of Stars
Jonathan	Grindlay	AR	Harvard-Center for Astrophysics	United States	Stellar Populations	A Complete Study of Binaries and X-ray Sources in the Globular Cluster 47 Tucanae
Paul	Groot	GO	Harvard-Smithsonian Center for Astrophysics	United States	Hot Stars	The Distances to AM CVn stars
Edward	Guinan	GO	Villanova University	United States	Cold Stars	LMC Eclipsing Binaries with Cepheid Components: The Key to the Extragalactic Distance Scale
Edward	Guinan	GO	Villanova University	United States	Cold Stars	The Best Brown Dwarf Yet?: FGS Astrometry of the Companion to the Hyades Eclipsing Binary V471 Tau
Theodore	Gull	AR	Goddard Space Flight Center	United States	ISM and Circumstellar Matter	Characterizing the CCD Spectroscopic Point Spread Function in STIS
Jules	Halpern	GO	Columbia University	United States	Galaxies	Tidal Disruption of Stars by Massive Black Holes in Galaxy Nuclei: After the Flare
Francois	Hammer	GO	DAEC, Observatoire de Paris-Meudon	France	Cosmology	The nature of the most luminous star-forming galaxies in the redshift range 0.4 to 1.5
J. Patrick	Harrington	GO	University of Maryland	United States	ISM and Circumstellar Matter	NGC 2610: A Benchmark for Photoionization Physics
Thomas	Harrison	GO	New Mexico State University	United States	Cold Stars	FGS Parallaxes of Cataclysmic Variables: Understanding Their Peculiar Secondary Stars
Suzanne	Hawley	GO	University of Washington	United States	Cold Stars	Transition Region Emission in Very Low Mass Stars
Sara R.	Heap	GO	Goddard Space Flight Center	United States	Cold Stars	Solar UV Radiation and the Origin of Life on Earth
Jeff	Hester	GO	Arizona State University	United States	Star Formation	Evolution of Star Forming Environments in H II Regions
Dean C.	Hines	SNAP	The University of Arizona	United States	AGN/Quasars	Host Galaxies of Obscured QSOs Identified by 2MASS
Kenneth	Hinkle	GO	NOAO	United States	ISM and Circumstellar Matter	V605 Aql: Sakurai's older brother
Craig	Hogan	AR	University of Washington	United States	Cosmology	Demography of High Redshift Type Ia Supernovae and Their Progenitor Populations
Jay	Holberg	AR	University of Arizona	United States	Hot Stars	An Archive Analysis of a Decade of HST White Dwarf Spectra
Jon	Holtzman	AR	New Mexico State University	United States	Stellar Populations	Comparisons of Local Group Stellar Populations: Construction of a Public Database
Elliott	Horch	GO	Rochester Institute of Technology	United States	Stellar Populations	The Masses and Luminosities of Population II Stars
J. Christopher	Howk	GO	The Johns Hopkins University	United States	ISM and Circumstellar Matter	Understanding the Warm Ionized Medium of the Galactic Halo
Myungshin	Im	SNAP	University of California, Santa Cruz	United States	Galaxies	STIS UV Snapshot Observation of Nearby Star Forming Galaxies
Chris	Impey	GO	University of Arizona	United States	AGN/Quasars	Host Galaxies of Gravitationally Lensed Quasars
Chris	Impey	GO	University of Arizona	United States	Quasar Absorption Lines and IGM	Quasar Absorbers and Large Scale Structure
Christopher	Johns-Krull	GO	University of California	United States	Star Formation	Resolving Molecular Hydrogen Disks Around T Tauri Stars. It's grade was a
Stefan	Jordan	GO	Universitaet Kiel	Germany	Hot Stars	Calibrating convection efficiency with quasi-molecular features in magnetic white dwarfs
Michael	Jura	GO	University of California, Los Angeles	United States	ISM and Circumstellar Matter	Circumstellar Gas Around HR 4796A

### Cycle 10 Approved Programs

First Name	Last Name	Proposal T	Institution	Country	Science Category	Title
Erich	Karkoschka	GO	University of Arizona	United States	Solar System	Spatially Resolved Spectroscopy of Uranus and Neptune
Scott	Kenyon	GO	Smithsonian Astrophysical Observatory	United States	Hot Stars	The Black Hole (?) in BG Gem
Ivan	King	GO	University of California, Berkeley	United States	Stellar Populations	Trigonometric Parallax of the Globular Cluster 47 Tucanae
Robert	Kirshner	GO	Harvard College Observatory	United States	Hot Stars	SINS: The Supernova INTensive Study--Cycle 10
Patricia	Knezek	GO	Space Telescope Science Institute	United States	Stellar Populations	The Evolution of Extreme Gas Rich Galaxies
Gloria	Koenigsberger	GO	UNAM-Instituto de Astronomia	Mexico	Hot Stars	The Wind-Wind Interactions in HD 5980
David	Koo	AR	University of California Observatories/Lick Observatory	United States	Cosmology	HST + Keck Study of Disk Systems in Galaxy Cluster Cl0024+16 at Redshift $z = 0.39$
David	Koo	AR	UCO/Lick Observatory, University of California, Santa Cruz	United States	Cosmology	The Ages of Very Red Spheroids and Bulges and Associated Disks at Redshifts $z \sim 0.8$
Anuradha	Koratkar	SNAP	Space Telescope Science Institute	United States	AGN/Quasars	Variability in the UV Spectrum of 3C 279: Testing Models for the Gamma-Ray Emission in Blazars
Vladimir	Krasnopolsky	AR	The Catholic University of America	United States	Solar System	Middle Ultraviolet Spectroscopy of Pluto and Charon
Gerard	Kriss	GO	Space Telescope Science Institute	United States	AGN/Quasars	Simultaneous HST, Chandra and FUSE Observations of Intrinsic Absorbers in AGN
S. R.	Kulkarni	GO	California Institute of Technology	United States	Galaxies	Gamma-ray burst progenitors: probing their environment
Arunav	Kundu	AR	Yale University	United States	Galaxies	The Dynamical Evolution of the Globular Cluster System of M87
Stephen	Lawrence	AR	Hofstra University	United States	ISM and Circumstellar Matter	HST Archival Imaging of the Light Echo of SN 1987A
Alain	Lecavelier des Etangs	GO	Institut d'Astrophysique de Paris, CNRS	France	Star Formation	Spatial distribution of the gas inside the Beta Pic disk
Karen	Leighly	GO	The University of Oklahoma	United States	AGN/Quasars	Exploratory Observations of a New Bright Quasar
Claus	Leitherer	GO	Space Telescope Science Institute	United States	Galaxies	An Ultraviolet Spectroscopic Survey of Star-Forming Galaxies in the Local Universe
Daniel	Lennon	GO	Isaac Newton Group Telescopes	United Kingdom	Hot Stars	Understanding high-redshift and starburst galaxies: A UV spectroscopic survey of B-stars in the SMC
Douglas	Leonard	GO	University of California at Berkeley	United States	Cosmology	The Cepheid Distance to NGC 1637: A Direct Comparison with the EPM Distance to SN 1999em
Mario	Livio	GO	Space Telescope Science Institute	United States	Cold Stars	Imaging the Dust Disk around Epsilon Eridani
Peter	Lundqvist	GO	Stockholm Observatory	Sweden	Hot Stars	Spectrum and pulse profile of PSR 0656+14 in the near-UV
Jesus	Maiz-Apellaniz	GO	Space Telescope Science Institute	United States	Stellar Populations	Objective-Prism Spectroscopy of Massive Young Clusters
Eliot	Malumuth	AR	Raytheon ITSS/Goddard Space Flight Center	United States	Galaxies	Using the HST Archive to Study the Optical Counterparts of Chandra X-ray Point Sources
Thomas	Marsh	GO	Department of Physics and Astronomy, Southampton University	United Kingdom	Hot Stars	The Evolution of Cataclysmic Variable Stars
Eduardo	Martin	GO	Institute for Astronomy	United States	Cold Stars	Fundamental properties of L-type dwarfs in binaries
Derck	Massa	GO	Raytheon ITSS	United States	Cold Stars	Determination of the Distances and Masses of 3 Galactic Cepheids
Philip	Massey	GO	Lowell Observatory	United States	Hot Stars	The Mass-Luminosity Relationship for High Mass Stars: Resolving the 'Mass Discrepancy' with HST
Melissa	McGrath	AR	Space Telescope Science Institute	United States	Solar System	Io's UV Emissions, 1994-1996
Bernard	McNamara	GO	New Mexico State University	United States	Galaxies	Getting to the Core of The Matter: The Inner Region of M15
William	Merline	GO	Southwest Research Institute	United States	Solar System	UV/Visible Spectroscopy of Asteroid 762 Pulcova and its Newly-discovered Moon

### Cycle 10 Approved Programs

First Name	Last Name	Proposal T	Institution	Country	Science Category	Title
Eric	Miller	GO	University of Michigan	United States	Quasar Absorption Lines and IGM	ionO6 Gas as an Indicator of the Diffuse Web of Baryons
Felix	Mirabel	GO	CEA-Service de Astrophysique	France	Hot Stars	Is GRO J1655-40 a runaway Black Hole?
Edmund	Nelan	GO	Space Telescope Science Institute	United States	Hot Stars	The Post-CE Status of the Massive WD Binary LB11146
Edmund	Nelan	SNAP	Space Telescope Science Institute	United States	Hot Stars	An Interferometric Harvest of Double Degenerates
Keith	Noll	SNAP	Space Telescope Science Institute	United States	Solar System	Photometry of a Statistically Significant Sample of Kuiper Belt Objects
M. Sean	O'Brien	GO	Space Telescope Science Institute	United States	Hot Stars	Test of a New Observational Method for Stellar Seismology
Robert	O'Connell	GO	University of Virginia	United States	Galaxies	Spatially Resolved Spectroscopy of Super Star Clusters in the M82 Starbursts
C.R.	O'Dell	GO	Vanderbilt University	United States	ISM and Circumstellar Matter	Fine Scale Temperature Fluctuations in Gaseous Nebulae
Deborah	Padgett	SNAP	California Institute of Technology	United States	Star Formation	Disks and Envelopes of Nearby Nebulous Young Stellar Objects: A Snapshot Survey
George	Pavlov	GO	Pennsylvania State University	United States	Hot Stars	The Spectrum and the Light Curve of the Nearest Millisecond Pulsar
Eric	Perlman	GO	University of Maryland, Baltimore County	United States	AGN/Quasars	The Structure and Physics of Extragalactic Jets
Saul	Perlmutter	GO	Lawrence Berkeley Laboratory	United States	Cosmology	Cosmological Parameters from Type Ia Supernovae at High Redshift
Max	Pettini	GO	Institute of Astronomy	United Kingdom	Quasar Absorption Lines and IGM	The $z = 0.93$ DLA in the Gravitationally Lensed QSO HE 0512-3329: a Test of Dust Bias in DLA Samples
Richard	Pogge	GO	The Ohio State University	United States	AGN/Quasars	STIS Spectrophotometry of Nearby Seyfert 2 Nuclei: Can we eliminate the Seyfert 2 class?
Kavan	Ratnatunga	AR	Carnegie Mellon University	United States	Cosmology	Cosmic Shear at Cosmological Distances
Michael	Rauch	AR	Carnegie Observatories	United States	Quasar Absorption Lines and IGM	Constraints on the Metal Enrichment History from Observations of Highly Ionized Gas
Dieter	Reimers	GO	Hamburger Sternwarte	Germany	Quasar Absorption Lines and IGM	Baryons in intermediate redshift ( $z > 1$ ) OVI absorbers
R. Michael	Rich	GO	University of California at Los Angeles	United States	Galaxies	High Spatial Resolution Spectroscopy of the Massive Globular Cluster G1
Douglas	Richstone	GO	University of Michigan	United States	Galaxies	The Fundamental Plane for Nuclear Black Holes
Douglas	Richstone	GO	University of Michigan	United States	Galaxies	The Biggest Black Holes
Susan	Ridgway	AR	The Johns Hopkins University	United States	AGN/Quasars	Radio-Quiet Quasar Hosts from $z = 0.3$ to $z = 3$
Roger	Romani	AR	Stanford University	United States	Hot Stars	Diagnosing the UV Pulse of the Crab: HST Spectropolarimetry in Context
Roger	Romani	GO	Stanford University	United States	Hot Stars	The Thermal Glow of Gamma Ray Pulsars
Abhijit	Saha	AR	NOAO	United States	Stellar Populations	Faint Photometric Standard Fields for HST
Raghvendra	Sahai	GO	Jet Propulsion Laboratory	United States	ISM and Circumstellar Matter	A YSO-like pulsed astrophysical jet and bipolar nebula in a dying star: WFPC2/STIS study of He2-90
Raghvendra	Sahai	GO	Jet Propulsion Laboratory, Caltech	United States	Cold Stars	High-Velocity Collimated Outflows and Equatorial Toroids in Cool Stars: A Study of V Hydrae and $\pi^1$ Gru
Raghvendra	Sahai	SNAP	Jet Propulsion Laboratory, California Institute of Technology	United States	ISM and Circumstellar Matter	Toward Understanding the Bipolar Geometries of Preplanetary Nebulae with High-Velocity Polar Flows
Kailash C.	Sahu	GO	Space Telescope Science Institute	United States	Stellar Populations	A Census of Planets in the Globular Cluster M22 and the Galactic Bulge
Meena	Sahu	AR	Goddard Space Flight Center	United States	ISM and Circumstellar Matter	Determining D/H Ratios and Physical Conditions in Local Interstellar Gas Using White Dwarf Probes
Vicki	Sarajedini	AR	Wesleyan University	United States	AGN/Quasars	AGN in the Groth Survey Strip: A Variability Study

### Cycle 10 Approved Programs

First Name	Last Name	Proposal T	Institution	Country	Science Category	Title
Dimitar	Sasselov	AR	Harvard-Center for Astrophysics	United States	Cosmology	Pushing the limits of variable stars detection with HST
Brian	Schmidt	GO	The Australian National University	Australia	Cosmology	Tracing the Cosmic Expansion to $z > 1$ with Type Ia Supernovae
Alfred	Schultz	GO	Space Telescope Science Institute	United States	Cold Stars	High Speed Photometry of the Transiting Planet HD 209458b
Richard	Shaw	SNAP	Space Telescope Science Institute	United States	ISM and Circumstellar Matter	Survey of the LMC Planetary Nebulae
Stephen	Smartt	GO	Institute of Astronomy	United Kingdom	Hot Stars	Direct imaging of the progenitors of massive, core-collapse supernovae
Stephen	Smartt	SNAP	Institute of Astronomy	United Kingdom	Hot Stars	An archive to detect the progenitors of massive, core-collapse supernovae
Paul	Smith	GO	University of Arizona	United States	AGN/Quasars	The Ultraviolet Properties of Obscured QSOs
David	Soderblom	GO	Space Telescope Science Institute	United States	Cold Stars	Completing the Astrometric Orbit for a Pair of Pre-Main Sequence Low-Mass Stars
John	Spencer	GO	Lowell Observatory	United States	Solar System	Io's Prometheus Plume, and the Composition and Spatial Distribution of Io's Atmosphere
Lawrence	Sromovsky	AR	University of Wisconsin-Madison	United States	Solar System	The structure of Neptune's zonal bands
Letizia	Stanghellini	GO	Space Telescope Science Institute	United States	ISM and Circumstellar Matter	Planetary Nebulae in the LMC: a study on stellar evolution and Populations.
Karl	Stapelfeldt	GO	Jet Propulsion Laboratory	United States	Star Formation	Resolving New Examples of, Edge-on Young Stellar Object Disks
Alan	Stern	GO	Southwest Research Institute	United States	Solar System	Observations of Comet Borrelly to Support the New Millennium/DS1 Flyby Occurring 23 September 2001
John	Stocke	AR	University of Colorado, Boulder	United States	Quasar Absorption Lines and IGM	Determining the Statistical Properties of the Local Ly-alpha Forest
John	Tonry	GO	Institute for Astronomy	United States	Cosmology	Cepheid Distances to Early-type Galaxies
Tommaso	Treu	AR	Space Telescope Science Institute	United States	Cosmology	The Fundamental Plane of field early-type galaxies from $z \sim 0.7$ to $z=0$
Todd	Tripp	GO	Princeton University Observatory	United States	Quasar Absorption Lines and IGM	A Survey for Missing Baryons in Highly Ionized Intergalactic Gas at Low Redshift
R. Brent	Tully	SNAP	University of Hawaii	United States	Cosmology	Local Galaxy Flows and the Local Mass Density
Meg	Urry	AR	Space Telescope Science Institute	United States	AGN/Quasars	The Host Galaxies of Radio-Loud AGN: Removing the Luminosity-Redshift Degeneracy
Meg	Urry	GO	Space Telescope Science Institute	United States	AGN/Quasars	The Physics of X-Ray/Optical Jets
Meg	Urry	GO	Space Telescope Science Institute	United States	AGN/Quasars	Evolution of the Host Galaxies in Low-Power AGN
Marten	van Kerkwijk	GO	Utrecht University	The Netherlands	Hot Stars	Optical Counterparts of Isolated Neutron Stars
Liese	van Zee	GO	Herzberg Institute of Astrophysics	Canada	Stellar Populations	The Stellar Population of UGCA 292, An Extreme Low Metallicity Galaxy
Gijs	Verdoes Kleijn	GO	Leiden Observatory	The Netherlands	Galaxies	Kinematics of emission-line gas disks in radio-quiet galaxies
Alfred	Vidal-Madjar	GO	Institut d'Astrophysique de Paris, CNRS	France	Star Formation	HI Detection of an Extra-Solar Planetary Atmosphere
Harold	Weaver	GO	The Johns Hopkins University	United States	Solar System	UV Spectroscopic Investigation of any Bright, Newly Discovered Comet
John	Webb	GO	University of New South Wales	Australia	Quasar Absorption Lines and IGM	D/H in Lyman Limit absorbers with simple velocity structure
John	Webb	SNAP	University of New South Wales	Australia	Quasar Absorption Lines and IGM	A Lyman Limit snapshot survey: the search for candidate D/H absorbers
Rachel	Webster	GO	University of Melbourne	Australia	AGN/Quasars	Microarcsecond Imaging of a Gravitationally Lensed QSO: 2237+0305
William	Welsh	GO	San Diego State University	United States	Hot Stars	Flares, Magnetic Reconnections and Accretion Disk Viscosity

### Cycle 10 Approved Programs

First Name	Last Name	Proposal T	Institution	Country	Science Category	Title
Daniel	Welty	GO	University of Chicago	United States	ISM and Circumstellar Matter	Variable Interstellar Absorption toward HD 219188 --- Probing the Structure of an Interstellar Cloud
Chris	Willott	GO	University of Oxford	United Kingdom	AGN/Quasars	The Relationship Between Radio Luminosity and Radio-Loud AGN Host Galaxy Properties
Andrew	Wilson	GO	University of Maryland	United States	AGN/Quasars	Synchrotron self-Compton Emission from the Radio Hot Spots of Cygnus A
Rogier	Windhorst	GO	Arizona State Univ., Physics & Astronomy	United States	Cosmology	Closing in on the Hydrogen Reionization Edge of the Universe at $z < 7.2$ with deep STIS/CCD Parallels
Rogier	Windhorst	SNAP	Arizona State University	United States	Galaxies	Mid-UV SNAPSHOT Survey of Nearby Irregulars: Galaxy Structure and Evolution Benchmark
Jennifer	Wiseman	GO	The Johns Hopkins University	United States	Star Formation	Helical Flows and Rotation in Protostellar Jets
Lutz	Wisotzki	GO	Institut fuer Physik, Universitaet Potsdam	Germany	Quasar Absorption Lines and IGM	A Damped LyAlpha System in a Close Separation Lens
Bruce	Woodgate	AR	Goddard Space Flight Center	United States	Star Formation	The Deep Coronagraphic STIS Point Spread Function
Farhad	Yusef-Zadeh	GO	Northwestern University	United States	Star Formation	A WFPC2 Study of Proplyds and a Protostellar Condensation at the Center of M20
Wei	Zheng	SNAP	The Johns Hopkins University	United States	Quasar Absorption Lines and IGM	UV Detectability of Bright Quasars in the Sloan Fields
Andrew	Zirm	GO	The Johns Hopkins University	United States	AGN/Quasars	Fossil Gaseous Halos of Massive Galaxies at $z \sim 1$
David	Zurek	AR	American Museum of Natural History	United States	Stellar Populations	The Stellar Populations Archive: Globular Clusters
