

Cycle 3 Approved Enhancements

During the March 2023 JSTUC meeting, a few enhancements were presented to the JSTUC as approved for Cycle 3:

- Enable Dispersed Hartman Sensor (DHS) use in NIRCam Grism Time Series template
- Enable moving target "shadow" observations
- Add flexible mosaic capability to PPS that allows mosaics to execute at multiple orients

This addendum is to inform the JWST community that these modes are not available for the Cycle 3 call for proposals. Competing priorities, complex implementations and distributions of the resources needed have make it not possible to offer them.

STScI will inform the JWST community when these modes are available.
