10530 - Probing Evolution And Reionization Spectroscopically (PEARS)

Cycle: 14, Proposal Category: GO

(Availability Mode: AVAILABLE)

INVESTIGATORS

Name	*Institution*	*E-Mail*
Dr. Sangeeta Malhotra (PI)	**Space Telescope Science Institute**	
Dr. Tamas Budavari (CoI)	The Johns Hopkins University	
Dr. Emanuele Daddi (CoI)	National Optical Astronomy Observatories, AURA	
Dr. Mark Dickinson (CoI)	National Optical Astronomy Observatories, AURA	
Dr. Ignacio Ferreras (CoI)	Universitat Zurich, Theoretische Physik	
Dr. Jonathan P. Gardner (CoI)	NASA Goddard Space Flight Center	
Dr. Caryl Gronwall (CoI)	The Pennsylvania State University	
Prof. Zoltan Haiman (CoI)	Columbia University in the City of New York	
Dr. Martin Kuemmel (CoI)	Space Telescope - European Coordinating Facility	
Dr. Anton Koekemoer (CoI)	Space Telescope Science Institute	
Dr. Gerhardt R. Meurer (CoI)	The Johns Hopkins University	
Dr. Leonidas Moustakas (CoI)	Jet Propulsion Laboratory	
Dr. Nino Panagia (CoI)	Space Telescope Science Institute - ESA	
Dr. Anna Pasquali (CoI)	Eidgenossiche Technische Hochschule (ETH)	pasquali@phys.ethz.ch
Dr. Norbert Pirzkal (CoI)	Space Telescope Science Institute	
Dr. James Rhoads (CoI)	Space Telescope Science Institute	
Dr. Kailash Sahu (CoI)	Space Telescope Science Institute	
Prof. Sperello di Serego Alighieri (CoI)	Osservatorio Astrofisico di Arcetri	
Dr. Jeremy R. Walsh (CoI)	Space Telescope - European Coordinating Facility	
Dr. Rachel S. Somerville (CoI)	Space Telescope Science Institute	
Dr. Rogier A. Windhorst (CoI)	Arizona State University	

Name	*Institution*	*E-Mail*
Mr. Chun Xu (CoI)	Space Telescope Science Institute	
Dr. Hao-Jing Yan (CoI)	Jet Propulsion Laboratory	

VISITS

Visit	*Targets*	*Configurations*	*Orbits Used*	*Last Orbit Planner Run*	*OP Current with Visit?*
01	(1) CDF-SOUTH-UDF ANY	ACS/WFC NIC3 WFPC2	1	18-Nov-2005 21:31:06.0	yes
02	(1) CDF-SOUTH-UDF ANY	ACS/WFC NIC3 WFPC2	1	18-Nov-2005 21:31:32.0	yes
03	(1) CDF-SOUTH-UDF ANY	ACS/WFC NIC3 WFPC2	1	18-Nov-2005 21:31:52.0	yes
04	(1) CDF-SOUTH-UDF ANY	ACS/WFC NIC3 WFPC2	1	18-Nov-2005 21:32:03.0	yes
05	(1) CDF-SOUTH-UDF ANY	ACS/WFC NIC3 WFPC2	1	18-Nov-2005 21:32:14.0	yes
06	(1) CDF-SOUTH-UDF ANY	ACS/WFC NIC3 WFPC2	1	18-Nov-2005 21:32:31.0	yes

Visit	*Targets*	*Configurations*	*Orbits Used*	*Last Orbit Planner Run*	*OP Current with Visit?*
07	(1) CDF-SOUTH-UDF ANY	ACS/WFC NIC3 WFPC2	1	18-Nov-2005 21:32:42.0	yes
08	(1) CDF-SOUTH-UDF ANY	ACS/WFC NIC3 WFPC2	1	18-Nov-2005 21:33:03.0	yes
09	(1) CDF-SOUTH-UDF ANY	ACS/WFC NIC3 WFPC2	1	18-Nov-2005 21:33:16.0	yes
10	(1) CDF-SOUTH-UDF ANY	ACS/WFC NIC3 WFPC2	1	18-Nov-2005 21:33:27.0	yes
11	(1) CDF-SOUTH-UDF ANY	ACS/WFC NIC3 WFPC2	1	18-Nov-2005 21:33:41.0	yes
12	(1) CDF-SOUTH-UDF ANY	ACS/WFC NIC3 WFPC2	1	18-Nov-2005 21:33:53.0	yes
13	(1) CDF-SOUTH-UDF ANY	ACS/WFC NIC3 WFPC2	1	18-Nov-2005 21:34:14.0	yes
14	(1) CDF-SOUTH-UDF ANY	ACS/WFC NIC3 WFPC2	1	18-Nov-2005 21:34:24.0	yes

Visit	*Targets*	*Configurations*	*Orbits Used*	*Last Orbit Planner Run*	*OP Current with Visit?*
15	(1) CDF-SOUTH-UDF ANY	ACS/WFC NIC3 WFPC2	1	18-Nov-2005 21:34:43.0	yes

ABSTRACT

While imaging with HST has gone deep enough to probe the highest redshifts, e.g. the GOODS survey and the Ultra Deep Field, spectroscopic identifications have not kept up. We propose an ACS grism survey to get slitless spectra of all sources in a wide survey region (8 ACS fields) up to z =27.0 magnitude, and an ultradeep field in the HUDF reaching sources up to z =28 magnitude. The PEARS survey will: (1) Find and spectrocopically confirm all galaxies between z=4-7. (2) Probe the reionization epoch by robustly determining the luminosity function of galaxies and low luminosity AGNs at z = 4 - 6. With known redshifts, we can get a local measure of star formation and ionization rate in case reionization is inhomogeneous. (3) Study galaxy formation and evolution by finding galaxies in a contiguous redshift range between 4 < z < 7, and black hole evolution through a census of low-luminosity AGNs. (4) Get a robust census of galaxies with old stellar populations at 1 < z < 2.5, invaluable for checking consistency with heirarchical models of galaxy formation. Fitting these galaxies' spectra will yield age and metallicity estimates. (5) Study star-formation and galaxy assembly at its peak at 1< z < 2 by identifying emission lines in star-forming galaxies, old populations showing the 4000A break, and any combination of the two. (6) Constrain faint white dwarfs in the Galactic halo and thus measure their contribution to the dark matter halo. (7) Derive spectro-photometric redshifts by using the grism spectra along with broadband data. This will be the deepest unbiased spectroscopy yet, and will enhance the value of the multiwavelength data in UDF and the GOODS fields to the astronomical community. To this end we will deliver reduced spectra to the HST archives.

OBSERVING DESCRIPTION

PEARS is a spectroscopic survey. Since it is slitless spectroscopy, we get spectra of everything in the field. In that sense it is an unbiased survey, without any preselection on the basis of color or anything else. We do lose objects in crowded areas, and low surface brightness objects same as everyone else. To mitigate the issue of overlapping spectra, we will take data along 2-3 roll angles and vary the dispersion direction. This has worked very well for the GRAPES project.

We will place the PEARS fields within the GOODS survey regions, split equally between north and south. This saves a factor of ~ 2 in HST time relative to surveying an entirely new field, as

we do not need our own deep images. It also opens the way for
powerful multi-wavelength studies combining our sensitive spectra with
optical morphologies and colors, infrared fluxes, and X-ray fluxes.
The division between the HDF-N and CDF-S regions will
provide a degree of robustness to cosmic variance and
ease potential scheduling difficulties.
{\bf PEARS-wide} will consist of four continguous ACS fields in
the GOODS HDF-North survey region, and four in the CDF-South
region. This is the number of fields required to get enough statistics
for the bright end of $z\sim6$ luminosity function. For number
densities of 0.1 $\Box'$ (Dickinson et
al. 2004, Bouwens et al. 2004.) PEARS-wide is expected to detect 9
such objects, thus pinning down the bright end of the luminosity
function to 30\%.
At a depth of 20 orbits, even PEARS-wide component is {\it ~ 6
times more sensitive for Lyman break galaxy spectra than typical
ground-based observations on 10m class telescopes}. The depth per
field is also optimized to reach a little fainter than $\lstar$ and thus
maximize the number of objects detected. Figure 5 shows that this
strategy yields the most $z\approx 6$ Lyman break galaxies per orbit
of observation, based on the UDF/GRAPES number-magnitude relation and
GRAPES sensitivity. The wide component provides an eightfold increase
in volume over the ultradeep pointing. This extra volume will provide
statistically useful samples of relatively rare sources like low
luminosity AGNs, and so will allow us to construct reliable luminosity
functions spanning several decades of luminosity for $z\sim 6$

galaxies, Galactic dwarf stars, AGNs etc.
PEARS-wide will constitute a unique spectroscopic survey in several ways: Unbiased spectroscopic coverage to a depth {\it I(AB)=27 over 80 $\Box'$}, complemented by deep GOODS photometry in four broadband filters (F435W, F606W, F775W, and F850LP). These direct images play several key roles in interpretating deep grism data. First, the direct images tell us where to place our spectroscopic extraction apertures. Second, morphologies complement spectra in object classification (e.g., strong lines with a point source implies an AGN) and allow comparative studies of morphological and spectroscopic evolution (e.g., studying the evolution of the Hubble sequence from $z>1$ to the present). Third, a detection in F435W flux guarantees redshift $z\la 4$, which is vital in distinguishing \lya sources from other, lower-redshift emission lines. The need for long integrations, detailed broad band information, and a uniform data set, are the key reasons that our science is best served by observations of the GOODS field, and not in parallel or archival fields.\footnote{The longest ACS grism exposures in the archive, apart from GRAPES, are about 24 ksec, and the longest with good supporting broad band data are < 20 ksec, i.e., well below half of the PEARS-wide depth.} {\bf PEARS-deep} The ultradeep component will add 40 orbits to the existing grism data (program 9793 in cycle 12) in the HUDF to achieve a spectroscopic depth unmatched in any previous spectroscopic survey and unlikely to be bettered prior to the launch of JWST. We will request upto four distinct roll angles in order to resolve source confusion due to overlapping spectra. There is considerable flexibility in the choice of these roll angles, leading to scheduling

flexibility. Going to a depth of 80 orbits will allow us to reach a magnitude limit of $z'=28$ spectroscopically, well matched to where the incompleteness in the images sets in (Yan \& Windhorst 2004).
\underbar{\bf Experimental details: Wide Component}
We request three distinct roll angles to disentagle overlapping spectra. Ideally, each of these would be separated by $\approx N\times 45^\circ$ from the others (with $N\ne 4$), but there is enough flexibility, such that any two or three roll angles spanning a total of 20° to 160° will work adequately if adjustments are needed to overcome scheduling difficulties. At each roll angle, a brief direct image (300s in F606W) will astrometry to the GOODS frame. This approach has worked very well for GRAPES. Three distinct epochs for the PEARS-wide will lead to better supernovae statistics.
The HDF-North observations will be placed within the GOODS IRAC ultradeep pointing region, which is the deepest mid-infrared image ever taken\footnote{The Spitzer-IRAC exposure time is ≈ 100 hours over $\approx 5\arcmin \times 3\arcmin$ and ≈ 70 hours over another $\approx 5\arcmin \times 3\arcmin$.} encompassing the Hubble Deep Field North, and the ground-based slit spectroscopy will provide cross-calibration of PEARS results.
The CDF-South observations will be placed adjacent to the Hubble Ultra-Deep Field (which is also the PEARS ultra-deep pointing).
%Keeping the four PEARS wide-field pointings adjacent to one
%another will maximize synergy with other programs, which are likely
%to concentrate their efforts near the HUDF itself.

Contiguity with the HUDF will allow us to further
map the large scale structure we identified at $z\approx 5.9$
in the GRAPES data (Malhotra et al 2005).
In both fields, we will space the ACS pointings closer than the
nominal $200"$ field size, so the tiling scheme is not destroyed by
variations in roll angle, resulting in easier scheduling
The upcoming GOODS V2.0 release (which combines GOODS and
subsequent supernova search data) will be sufficiently deep to allow
ready cataloguing of all spectroscopically detectable objects in
PEARS-wide.
\underbar{\bf S/N estimates:}
\underbar{\it Lyman Breaks:} We scale our exposure time vs. sensitivity
estimates from the GRAPES results (Malhotra et al 2005).
We achieved spectroscopic
confirmations of $z\approx 6$ Lyman break galaxies with 50\%
completeness at $z_{AB} = 27.5$ magnitude. In the GRAPES data, the
signal to noise ratio continues to scale as $\sqrt{t}$ to the full
depth of the survey (Pirzkal et al 2004). Using this scaling, we find
that the expected PEARS-ultradeep limit for Lyman break galaxies is
about 0.4 magnitudes deeper than in GRAPES (expected 50\%
completeness near 27.9 mag), while the PEARS-wide limit is 0.4
magnitudes shallower (i.e., 50\% completeness near 27.1 mag).
\underbar{\it Spectral Lines:} For emission lines
we obtain 5σ detection limit of
$6\times 10^{-18} \ergcm2s$ for a 40 orbit exposure (Xu et al 2005).
This agrees with the ACS spectroscopic ETC for a light profile

with half-light diameter $\theta_h=0.25"$ ($\equiv$FWHM) and measured
in a circular aperture of 5 pixel ($0.25"$) diameter. For our 80
orbit ultradeep pointing, the corresponding limit is $4.5\times 10^{-18}
\ergcm2s$ (5σ), while for the PEARS-wide fields it
will be $8.5\times 10^{-18} \ergcm2s$.
\underbar{\it Confusion and overlapping spectra:} In our cycle~12
GRAPES proposal, we expected (and observed) that overlapping spectra
affect $\sim 17\%$ of the data for objects at $z'=27$. The corresponding calcul
ations for 80 and
20 orbit depths show that the faintest sources extracted would suffer
from contamination in $p_1 = 23\%$ and 12% of the data,
respectively. Since every roll angle gives an independent set of
contaminating objects, the probability that a pixel will be
contaminated in {\it all} of N roll angles becomes p_1^N, while
the mean fraction of roll angles with contamination equals p_1:
Significant, but certainly not prohibitive. It may also be possible
to mitigate contamination by a iterative fitting method like "CLEAN" in radio
astronomy (see Ma\'{\i}z
2004\footnote{http://www.stsci.edu/~jmaiz/ps/9096/baltimore.pdf} for a
related method).

Visit

Proposal 10530, Visit 01 Sat Nov 19 03:35:24 GMT 2005

Diagnostic Status: No Diagnostics

Scientific Instruments: ACS/WFC, WFPC2, NIC3

Visit

Proposal 10530, Visit 21 Sat Nov 19 03:35:42 GMT 2005

Diagnostic Status: No Diagnostics

Scientific Instruments: ACS/WFC, WFPC2, NIC3

Special Requirements: BRIGHT EARTH AVOID 25.0; SCHED 70%; ORIENT 263.0D TO 267.0 D

Comments: Third roll angle, first visit. Roll revised because intial pick (319-329) did not yield guide stars. Expanded roll (all the way up to 360) should be ok in terms of not overlapping other GRAPES / PEARS position angles. For scheduling, the range from about 350-360 is unlikely to add much but it again does not hurt to allow it. The roll range 319 to 360 was poor for scheduling. Back off and go to 265 +- 2 or so.

Visit

Proposal 10530, Visit 37 Sat Nov 19 03:35:54 GMT 2005

Diagnostic Status: No Diagnostics

Scientific Instruments: ACS/WFC, WFPC2, NIC3

Special Requirements: BRIGHT EARTH AVOID 25.0; SCHED 70%; SAME ORIENT AS 31

Comments: Fourth roll angle, seventh visit, for 2 grism exposures in an orbit with sched. 30 Central dither box, first part.

Fixed Targets

#	Name	Target Coordinates	Targ. Coord. Corrections	Fluxes	Miscellaneous
(1)	CDF-SOUTH-UDF Alt Name1: CDF-SOUTH-033240-274800	RA: 03 32 39.0000 (53.1625000d) Dec: -27 47 29.10 (-27.79142d) Equinox: J2000 Plate Id: (?)		V=27.0	Coordinate Source: HST_IMAGE

Visit

Proposal 10530, Visit 48 Sat Nov 19 03:36:08 GMT 2005

Diagnostic Status: No Diagnostics

Scientific Instruments: ACS/WFC, WFPC2, NIC3

Special Requirements: BRIGHT EARTH AVOID 25.0; SCHED 70%; ORIENT 280.0D TO 300.0 D

Comments: To begin first PEARS-Wide southern field, second roll angle. Full roll range is 280 to 300, in first draft. Restricting to 291 (+-0) will keep a nice i dropout in a corner of the field (number 107 from Haojing's list). If this does not hurt scheduling much we can try it, but if scheduling gets rough we should drop it. Email from Beth Perriello on 19 May 2005: The 291 roll angle does not have guide stars. So, go back to 280 through 300.

Visit

Proposal 10530, Visit 4F Sat Nov 19 03:36:13 GMT 2005

Diagnostic Status: No Diagnostics

Scientific Instruments: ACS/WFC, WFPC2, NIC3

Special Requirements: BRIGHT EARTH AVOID 25.0; SCHED 70%; ORIENT 320.0D TO 335.0 D

Comments: To begin first PEARS-Wide southern field, third roll angle. Basic orient range for ACS should be 320 to 350. But there is loss of WFPC2 overlap with GOODS from the outset, falling to half the WFPC2 field at 343 degrees. So we will restrict this visit to 320 up to 335 in the first instance and relax it again if need be.

Visit

Proposal 10530, Visit 4G Sat Nov 19 03:36:13 GMT 2005

Diagnostic Status: No Diagnostics

Scientific Instruments: ACS/WFC, WFPC2, NIC3

Special Requirements: BRIGHT EARTH AVOID 25.0; SCHED 70%; SAME ORIENT AS 4F

Comments: To begin first PEARS-Wide southern field, third roll angle. Basic orient range for ACS should be 320 to 350. But there is loss of WFPC2 overlap with GOODS from the outset, falling to half the WFPC2 field at 343 degrees. So we will restrict this visit to 320 up to 335 in the first instance and relax it again if need be.

Visit

Proposal 10530, Visit 6F Sat Nov 19 03:36:28 GMT 2005

Diagnostic Status: No Diagnostics

Scientific Instruments: ACS/WFC, WFPC2, NIC3

Special Requirements: BRIGHT EARTH AVOID 25.0; SCHED 70%; ORIENT 347.0D TO 355.0 D

Comments: OPTIMAL PA is 350 degrees; please implement at this roll if schedulable there. However we've increased the range to 347-355 for better schedulability. To begin second PEARS-Wide southern field, third roll angle. Original range, from 320 to 350, has been cut back to just 350 degrees in order to maximize i-drops with IRAC detections in the field. This gets us 138, 133, and 107 from Haojing's list. A point option of 350 degrees restricts scheduling a lot (about 3 days, Oct 28-31 or so). We can take max up to 359.9 without losing these I drops. Taking the lower limit down to 347.5 might help. But it is unlikely to help scheduling.

Proposal 10530, Visit 6L Sat Nov 19 03:36:32 GMT 2005

Diagnostic Status: No Diagnostics

Scientific Instruments: ACS/WFC, WFPC2, NIC3

Special Requirements: BRIGHT EARTH AVOID 25.0; SCHED 70%; SAME ORIENT AS 6F; ON HOLD

Comments: To begin second PEARS-Wide southern field, third roll angle

On Hold Comments: Extra visit: Will be released if we are unable to schedule all 14 orbits on this target at other (earlier) roll ranges.

Fixed Targets

#	Name	Target Coordinates	Targ. Coord. Corrections	Fluxes	Miscellaneous

Proposal 10530, Visit 89 Sat Nov 19 03:36:40 GMT 2005

Diagnostic Status: No Diagnostics

Scientific Instruments: ACS/WFC, WFPC2, NIC3

Special Requirements: BRIGHT EARTH AVOID 25.0; SCHED 70%; SAME ORIENT AS 88

Comments: To begin third PEARS-Wide southern field, second roll angle. Roll originally was 280 to 300; restricted to a small range from 284 to 287.5 in order to get LyA-CTIO-2 onto the NIC3 array.

Fixed Targets

#	Name	Target Coordinates	Targ. Coord. Corrections	Fluxes	Miscellaneous

Visit

Proposal 10530, Visit G8 Sat Nov 19 03:37:10 GMT 2005

Diagnostic Status: No Diagnostics

Scientific Instruments: ACS/WFC, WFPC2, NIC3

Special Requirements: BRIGHT EARTH AVOID 25.0; SCHED 70%; ORIENT 314.0D TO 315.5 D

Comments: To begin first PEARS-Wide northern field, second roll angle. Default orient was 290 to 310; changed to 314-315.5 to try to include an I-drop in the parallel NIC3 field. (This also keeps WFPC2 parallels entirely inside GOODS).

Visit

Proposal 10530, Visit GF Sat Nov 19 03:37:15 GMT 2005

Diagnostic Status: No Diagnostics

Scientific Instruments: ACS/WFC, WFPC2, NIC3

Special Requirements: BRIGHT EARTH AVOID 25.0; SCHED 70%; ORIENT 245.0D TO 250.0 D

Comments: To begin first PEARS-Wide northern field, third roll angle. Upper limit here should be 250 degrees roll, to keep a high priority SN host in the field and off the chip gap. Lower bound may have more influence on the range of orients achieved. Increasing this up to 243.5 (from 240) should have zero scheduling impact. Further increase costs about one day of scheduling per 1.2 degrees increase in minimum PA. Try going to 245, for a minimum 15 degree splitting between rolls.

Visit

Proposal 10530, Visit JF Sat Nov 19 03:38:06 GMT 2005

Diagnostic Status: No Diagnostics

Scientific Instruments: ACS/WFC, WFPC2, NIC3

Special Requirements: BRIGHT EARTH AVOID 25.0; SCHED 70%; ORIENT 259.6D TO 269.8 D

Comments: To begin fourth PEARS-Wide northern field, third roll angle New roll angle based on Beth Perriello's comments on 19 May 2005, email... We had to move the "J1" series roll angle to get guide stars, at which point we have to move this "JF" series also (else it ends up being nearly the same as the revised J1 series).

Visit

Proposal 10530, Visit K1 Sat Nov 19 03:38:11 GMT 2005

Diagnostic Status: No Diagnostics

Scientific Instruments: ACS/WFC, WFPC2, NIC3

Special Requirements: BRIGHT EARTH AVOID 25.0; SCHED 70%; ORIENT 275.0D TO 275.0 D; BETWEEN 01-SEP-2005:00:00:00 AND 05-SEP-2005:00:00:00

Comments: To begin first PEARS-Wide southern field, second roll angle. Full roll range is 280 to 300, in first draft. Restricting to 291 (+-0) will keep a nice i dropout in a corner of the field (number 107 from Haojing's list). If this does not hurt scheduling much we can try it, but if scheduling gets rough we should drop it. Email from Beth Perriello on 19 May 2005: The 291 roll angle does not have guide stars. So, go back to 280 through 300.

Visit

Proposal 10530, Visit KG Sat Nov 19 03:38:17 GMT 2005

Diagnostic Status: No Diagnostics

Scientific Instruments: ACS/WFC, WFPC2, NIC3

Special Requirements: BRIGHT EARTH AVOID 25.0; SCHED 70%; SAME ORIENT AS KF

Comments: This is a repeat of visit 6G.

Fixed Targets

#	Name	Target Coordinates	Targ. Coord. Corrections	Fluxes	Miscellaneous
(7)	CDF-S-PEARS-2	RA: 03 32 42.6000 (53.1775000d) Dec: -27 50 31.20 (-27.84200d) Equinox: J2000 Plate Id: (?)		V=27.0	Coordinate Source: IMAGE_TIED_TO_GSC_FRAME

Exposures

#	Label	Target	Config,Mode,Aperture	Spectral Els.	Opt. Params.	Special Reqs.	Groups	Exp. Time/[Actual Dur.]	Orbit
1	direct image (long enough to end orbit)	(7) CDF-S-PEARS-2	ACS/WFC, ACCUM, WFCENTER	F606W	CR-SPLIT=NO; GAIN=1	POS TARG 1.433,3.167	Prime + Parallel Group 1-5	354.0 Secs *[==>]*	***[1]***
2	Grism observation 1	(7) CDF-S-PEARS-2	ACS/WFC, ACCUM, WFCENTER	G800L	AUTOIMAGE=NO; CR-SPLIT=NO; GAIN=1	POS TARG 1.433,3.167	Prime + Parallel Group 1-5	1910.0 Secs *[==>]*	***[1]***
