ABSTRACT

We propose to obtain deep ACS (F606W, F775W, F850LP) imaging in the area of the original Hubble Ultra Deep Field NICMOS parallel fields and - through simultaneous parallel observations - deep NICMOS (F110W, F160W) imaging of the ACS UDF area. Matching the extreme imaging depth in the optical and near-IR bands will result in seven fields with sufficiently sensitive multiband data to detect the expected typical galaxies at z=7 and 8. Presently no such a field exist. Our combined optical and near-IR ultradeep fields will be in three areas separated by about 20 comoving Mpc at z=7. This will allow us to give a first assessment of the degree of cosmic variance. If reionization is a process extending over a large redshift interval and the luminosity function doesn't evolve strongly beyond z=6, these data will allow us to identify of the order of a dozen galaxies at 6.5<z<8.5 - using the Lyman break technique - and to place a first constrain on the luminosity function at z>6.5. Conversely, finding fewer objects would be an indication that the bulk of reionization is done by galaxies at z=6. By spending 204 orbits of prime HST time we will capitalize on the investment of 544 prime orbits already made on the Hubble Ultra Deep Field (UDF). We have verified that the program as proposed is schedulable and that it will remain so even if forced to execute in the 2-gyro mode. The data will be non-proprietary and the reduced images will be made public within 2 months from the completion of the observations.

OBSERVING DESCRIPTION

The plan is to obtain ACS ultradeep exposures in F606W, F775W, and F850LP on each of the two NICMOS ultradeep field obtained in parallel to the main ACS HUDF. At the same time we will attempt to have the NICMOS parallel observations to this proposal fall on top of the main AS HUDF.

Visit

Proposal 10632, Visit F8, completed Sat Sep 16 01:23:20 GMT 2006

Diagnostic Status: No Diagnostics

Scientific Instruments: ACS/WFC, NIC3

Special Requirements: (none)

Comments: UDF12 parallel field visits F7-F8 are a 4 point pattern
