## **ABSTRACT**

We propose to conduct a public infrared survey of the host galaxies of Swift selected gamma-ray bursts (GRBs) at  $z < 3$ . By obtaining deep, diffraction limited imaging in the IR we will complete detections for the host galaxies, and in concert with our extensive ground based afterglow and host programmes will compile a detailed catalog of the properties of high- $z$  galaxies selected by GRBs. In particular these observations will enable us to study the colours, luminosities and morphologies of the galaxies. This in turn informs studies of the nature of the progenitors and the role of GRBs as probes of star formation across cosmic history. Ultimately it provides a product of legacy value which will greatly complement further studies with next generation facilities such as ALMA and JWST.

## **OBSERVING DESCRIPTION**

We propose to observe a sample of GRB host galaxies at  $z < 3$ .

We will use three different strategies for this, based on the redshift of the burst. These will enable us to reach deeper limits on the more distant bursts, while ensuring that visits of varying duration are available for the scheduling of the programme.

For hosts at  $z < 1$  we will conduct observations using a 2-point dither and only two exposures. These will have a total exposure time, including overhead of  $< 1400$ s and so will fit in short scheduling blocks.

For hosts at  $1 < z < 2$  we will use a 3 point dither, and a total exposure time of  $\sim 1700$ s

Finally for hosts at  $2 < z < 3$  we will utilize a 4 point box dither to allow a degree of PSF recovery. These observations will take a total of  $\sim 2200$ s.

<b>Orbit Structure</b>	<b>Server Version: 20100505</b>									
	<p>The diagram illustrates the orbit structure over a 5500-second period. Key events include:</p> <ul style="list-style-type: none"> <li><b>GS Acq</b>: Ground Station Acquisition at approximately 100s.</li> <li><b>Exp. 1</b>: Three exposure periods, each marked with a pointing maneuver. The first exposure starts around 400s, the second around 800s, and the third around 1200s.</li> <li><b>Reconfig</b>: A reconfiguration period occurring between the second and third exposures.</li> <li><b>Unused Visibility = 1683</b>: A period of 1683 seconds where the target is visible but not observed, starting around 1700s.</li> <li><b>Occultation</b>: A period where the target is obscured by the Earth, starting around 3400s and ending around 5500s.</li> </ul>
