ABSTRACT

Dual Active Galactic Nuclei (AGNs) are actively accreting supermassive black hole (SMBH) pairs co-rotating in merging galaxies with separations of less than a few kpc. Despite decades of searching, and strong theoretical reasons to believe they exist, unambiguously confirmed dual AGNs are surprisingly scarce, which contradicts naive Lambda-CDM prediction. We propose a SNAP survey with WFC3 to systematically identify dual AGNs. We exploit a well-tested technique, which has a success rate of 10-25% at least, based on the selection of AGNs with double-peaked [O III] emission lines. We have reached the limits of what we can learn from the ground. We request HST's superb image quality in both optical and NIR and its high sensitivity to explore a new regime of dual AGNs at a more advanced merger stage, inaccessible from the ground or any other space facility. With the proposed observations well suited for a SNAP program, we will determine the frequency of dual AGNs down to the smallest scales attainable with current facilities to test the hierarchical merger paradigm, and explore the demographics of dual AGNs as a function of separation to better understand the accretion and evolution of SMBH pairs in merging galaxies.

OBSERVING DESCRIPTION

We exploit F105W and UVIS imaging of AGNs with double-peaked [O III] emission lines to identify dual AGNs. We use F105W to trace old stellar bulges and two UVIS filters (F547M and F621M for the majority of our targets) to measure [O III] emission.

Proposal 12521 - Visit 01 - The Frequency and Demographics of Dual Active Galactic Nuclei

Thu Dec 01 02:23:13 GMT 2011

Visit	Proposal 12521, Visit 01, scheduling Diagnostic Status: No Diagnostics Scientific Instruments: WFC3/IR, WFC3/UVIS Special Requirements: BETWEEN 2012.175 AND 2012.182:12 Comments: BETWEEN allows this visit to schedule immediately before visit 13 of GO program 12332 in order to minimize slew distance prior to that visit.
