

13695 - STarlight Absorption Reduction through a Survey of Multiple Occulting Galaxies (STARSMOG)

Cycle: 22, Proposal Category: SNAP

(Availability Mode: SUPPORTED)

INVESTIGATORS

<i>Name</i>	<i>Institution</i>	<i>E-Mail</i>
Dr. Benne W. Holwerda (PI) (ESA Member) (Contact)	Sterrewacht Leiden	holwerda@strw.leidenuniv.nl
Dr. William C. Keel (CoI) (AdminUSPI)	University of Alabama	wkeel@ua.edu
Dr. Joe Liske (CoI) (ESA Member)	European Southern Observatory - Germany	jlsike@eso.org
Prof. Joss Bland-Hawthorn (CoI)	University of Sydney	jbh@physics.usyd.edu.au
Dr. Christopher J. Conselice (CoI) (ESA Member)	University of Nottingham	conselice@nottingham.ac.uk
Dr. Loretta Dunne (CoI)	University of Canterbury	loretta.dunne@canterbury.ac.nz
Dr. Aaron Robotham (CoI)	University of Western Australia	aaron.robatham@uwa.edu.au
Dr. Ivan Baldry (CoI) (ESA Member)	Liverpool John Moores University	ikb@astro.livjm.ac.uk
Dr. R. J. Tuffs (CoI) (ESA Member)	Max-Planck-Institut fur Kernphysik	richard.tuffs@mpi-hd.mpg.de
Prof. Simon P. Driver (CoI)	University of Western Australia	simon.driver@icrar.org

150 Total Orbits Used

ABSTRACT

Dust absorption remains the poorest constrained parameter in both Cosmological distances and multi-wavelength studies of galaxy populations. A galaxy's dust distribution can be measured to great accuracy in the case of an overlapping pair of galaxies, i.e., when a foreground spiral galaxy accidentally overlaps a more distant, preferably elliptical galaxy. We have identified over 300 bona-fide overlapping pairs --well separated in redshift but close on the sky-- in the GAMA spectroscopic survey, taking advantage of its high completeness (98%) on small scales.

We propose to map the fine-scale (~ 50 pc) dust structure in these occulting galaxies, using HST/WFC3 SNAP observations. The resulting dust maps will (1) serve as an extinction probability for supernova lightcurve fits in similar type host galaxies, (2) strongly constrain the role of ISM structure in Spectral Energy Distribution models of spiral galaxies, and (3) map the level of ISM turbulence (through the spatial power-spectrum).

We ask for SNAP observations with a parent list of 355 targets to ensure a complete and comprehensive coverage of each foreground galaxy mass, radius and inclination. The resulting extinction maps will serve as a library for SNIa measurements, galaxy SED modelling and ISM turbulence measurements.

OBSERVING DESCRIPTION

In this Phase 2 file we have the full list of SNAP targets for WFC3 F606W and ACS parallel F814W observations. WFC3 is for the main science described in the proposal, ACS observations are for morphological work in the GAMA fields.

orientation is unconstrained: we will use ACS observations of any part of the sky next to the WFC3 observations.

We have shortened the ACS observations to 830 seconds to match the duration of the WFC3 observations.

We ask for 900 second WFC3 observations but in case longer exposure times are possible, we would gladly take the opportunity to integrate longer.

Conversely, our nominal science case used 900 seconds but shorter exposures are in fact very useful. Depending on shorter exposures, much if not all the described science will be still be possible.
