350 Total Orbits Used

ABSTRACT

This gap proposal aims to populate the archive with HST imaging of previously unobserved galaxies from the Arp and Arp & Mador atlases, to establish a much larger database from which to draw promising candidates for JWST, ALMA, and HST UV initiative studies. In addition to their obvious utility for scientific study, systems from the Arp atlases make ideal targets for a gap proposal for a number of reasons: (1) targets are distributed throughout the sky, with the exception of low Galactic latitude; (2) the galaxies are bright and only require modest exposure times; (3) all of the galaxies are vetted as being "interesting", simply due to their inclusion in the atlases in the first place; (4) the public outreach value of any of the images is likely to be extremely high. They also will provide an excellent complement to the existing "gap" observations from GO-14840's observations of NGC galaxies, which is dominated by more typical galaxies. Observations consist to 2 dithered ACS exposures, primarily in F606W. In cases where there was existing but partial coverage in F606W or F555W, we use F475W to provide color information in the area of overlap.

OBSERVING DESCRIPTION

2 dithered ACS/WFC exposures per target, typically in F606W except in cases where archival data favors using F475W.
