54 Total Orbits Used

ABSTRACT

Proper motions (PMs) from HST and Gaia have revolutionized the field of Galactic archaeology in the Milky Way (MW), but PM studies in the M31 system are still in their early stages. Gaia can only detect the brightest stars in star forming regions at the distance of M31, so HST is the only observatory currently capable of measuring PMs of M31 satellite dwarf spheroidals. We propose to obtain second epoch imaging of 7 M31 satellites (And I, II, III, VII, XV, XVI, XXVIII), targeting the same fields with earlier deep HST observations to measure PMs with uncertainties of 40-50 km/s. We will use the PM-based 6D phase space information of satellites to constrain the total M31 mass with uncertainties at the 30% level. We will also test the dynamical stability of the Great Plane of Andromeda using our PM results for And I, III, and XVI. This will provide clues to the origin of satellite planes observed around M31 as well as the MW. The orbits derived for individual satellites will allow us to disentangle the processes that have contributed to the quenching of star formation, connect our target galaxies to M31 tidal structures, and test the merger scenario of And II. Altogether, our proposed measurements will nearly triple the sample of M31 satellites with available PMs, dramatically improving our understanding of the M31 halo and its satellite system. A revised estimate for the mass of M31 will also improve our understanding of the dynamics in the Local Group (LG), and set an important benchmark for studies of satellite systems beyond the LG. Finally, the results from this program will inform us how representative the MW is in a cosmological context.

OBSERVING DESCRIPTION

We will observe 7 dwarf satellite galaxies of M31 using ACS/WFC and WFC3/UVIS. All of our target galaxies have deep ACS/WFC imaging data in the HST archive. All but And VII also have deep WFC3/UVIS imaging data observed as parallel fields. The dwarf galaxies And I, II, III, XV, XVI, and XXVIII were observed in 2013-2015 through HST programs GO-13028 and GO-13739 using the F475W and F814W filters. And VII was observed in 2006 through HST GO-10430 using the F435W and F555W filters.

In this program, Each target dwarf galaxy will be observed using the same telescope pointings and orientations as the first-epoch images to maximize the overlaps of both primary ACS/WFC and parallel WFC3/UVIS fields between the first- and second-epoch data. This will also minimize errors originating from imperfect CTE and geometric distortion corrections. To measure PMs, it is sufficient to observe only in one filter. We will image all

Proposal 16273 (STScI Edit Number: 1, Created: Friday, November 12, 2021 at 7:01:13 PM Eastern Standard Time) - Overview

target galaxies, with the exception of And VII, using the F814W filter to measure PMs. F814W is found to give one of the best astrometric handles on background galaxies. For And VII, we will use the F606W filter which has a wider bandwidth than the F555W originally used in the first epoch, for creating high signal- to-noise (S/N) templates for background galaxies, i.e., unlike the other galaxies, we will use the second-epoch data to build templates for And VII. Individual exposure times will be half-orbit long, and we will use dithered patterns specially designed to maximize pixel-phase coverage.

Proposal 16273 - And1-V1 (01) - Andromeda and the Seven Dwarfs: M31 Mass, Satellite Orbits, and the Nature of the Satellite Plane

Sat Nov 13 00:01:13 GMT 2021

Visit	<p>Proposal 16273, And1-V1 (01), scheduling</p> <p>Diagnostic Status: No Diagnostics</p> <p>Scientific Instruments: WFC3/UVIS, ACS/WFC</p> <p>Special Requirements: SCHED 50%; ORIENT 201.4D TO 202.4 D; AFTER 01-JAN-2021:00:00:00; GROUP 01,02,03 WITHIN 15D</p> <p><i>Comments: This is the first out of three visits for obtaining second-epoch images of Andromeda I. This visit spends 4 orbits in total with ACS/WFC being the primary and the WFC3/UVIS being the parallel instruments. For proper motion measuring purpose, we require to match our telescope orientations to the first-epoch observations for both the primary and parallel fields. We have accordingly added the Visit Orientation Requirements. We have grouped Visits 01, 02, and 03 and specified these visits to be observed within a 15 day period so that all images can be treated as a single-epoch data for astrometric analyses. Our science requires that the time baseline between the previous first- and this cycle's second-epoch is at least 6 years apart (this is specified in the Phase 1 proposal). We therefore added a Timing Requirement of "AFTER 01-JAN-2021:00:00:00".</i></p>

Proposal 16273 - And2 (04) - Andromeda and the Seven Dwarfs: M31 Mass, Satellite Orbits, and the Nature of the Satellite Plane

Sat Nov 13 00:01:14 GMT 2021

Visit	<p>Proposal 16273, And2 (04), failed</p> <p>Diagnostic Status: No Diagnostics</p> <p>Scientific Instruments: WFC3/UVIS, ACS/WFC</p> <p>Special Requirements: SCHED 70%; ORIENT 174.5D TO 176.5 D; AFTER 01-JAN-2021:00:00:00</p> <p><i>Comments: This is the visit for obtaining second-epoch images of Andromeda II. This visit spends 4 orbits in total with ACS/WFC being the primary and the WFC3/UVIS being the parallel instruments. For proper motion measuring purpose, we required to match our telescope orientations to the first-epoch observations for both the primary and parallel fields. We have accordingly added the Visit Orientation Requirements. Our science requires that the time baseline between the previous first- and this cycle's second-epoch is at least 8 years apart (this is specified in the Phase 1 proposal). We therefore added a Timing Requirement of "AFTER 01-JAN-2021:00:00:00". Finally, we changed the schedulability requirement to 70 because there were no available windows for 60 and lower.</i></p>

Proposal 16273 - And3-V1 (05) - Andromeda and the Seven Dwarfs: M31 Mass, Satellite Orbits, and the Nature of the Satellite Plane

Sat Nov 13 00:01:14 GMT 2021

Visit	<p>Proposal 16273, And3-V1 (05), scheduling</p> <p>Diagnostic Status: No Diagnostics</p> <p>Scientific Instruments: WFC3/UVIS, ACS/WFC</p> <p>Special Requirements: ORIENT 91.1D TO 91.1 D; AFTER 01-FEB-2021:00:00:00; GROUP 05,06 WITHIN 15D</p> <p><i>Comments: This is the first out of two visits for obtaining second-epoch images of Andromeda V. This visit spends 4 orbits in total with ACS/WFC being the primary and the WFC3/UVIS being the parallel instruments. For proper motion measuring purpose, we required to match our telescope orientations to the first-epoch observations for both the primary and parallel fields. We have accordingly added the Visit Orientation Requirements. We have grouped Visits 05 and 06 and specified these visits to be observed within a 15 day period so that all images can be treated as a single-epoch data for astrometric analyses. Our science requires that the time baseline between the previous first- and this cycle's second-epoch is at least 7 years apart (this is specified in the Phase 1 proposal). We therefore added a Timing Requirement of "AFTER 01-FEB-2021:00:00:00".</i></p>

Proposal 16273 - And15-V1 (07) - Andromeda and the Seven Dwarfs: M31 Mass, Satellite Orbits, and the Nature of the Satellite Plane

Sat Nov 13 00:01:14 GMT 2021

Visit	<p>Proposal 16273, And15-V1 (07), failed</p> <p>Diagnostic Status: No Diagnostics</p> <p>Scientific Instruments: WFC3/UVIS, ACS/WFC</p> <p>Special Requirements: SCHED 70%; ORIENT 200.9D TO 200.9 D; AFTER 01-JAN-2021:00:00:00; GROUP 07,08 WITHIN 15D</p> <p><i>Comments: This is the first out of two visits for obtaining second-epoch images of Andromeda XV. This visit spends 3 orbits in total with ACS/WFC being the primary and the WFC3/UVIS being the parallel instruments. For proper motion measuring purpose, we required to match our telescope orientations to the first-epoch observations. We have accordingly added the Visit Orientation Requirements. We have grouped Visits 07 and 08 and specified these visits to be observed within a 15 day period so that all images can be treated as a single-epoch data for astrometric analyses. Our science requires that the time baseline between the previous first- and this cycle's second-epoch is at least 7 years apart (this is specified in the Phase 1 proposal). We therefore added a Timing Requirement of "AFTER 01-JAN-2021:00:00:00".</i></p>

Proposal 16273 - And16 (09) - Andromeda and the Seven Dwarfs: M31 Mass, Satellite Orbits, and the Nature of the Satellite Plane

Sat Nov 13 00:01:14 GMT 2021

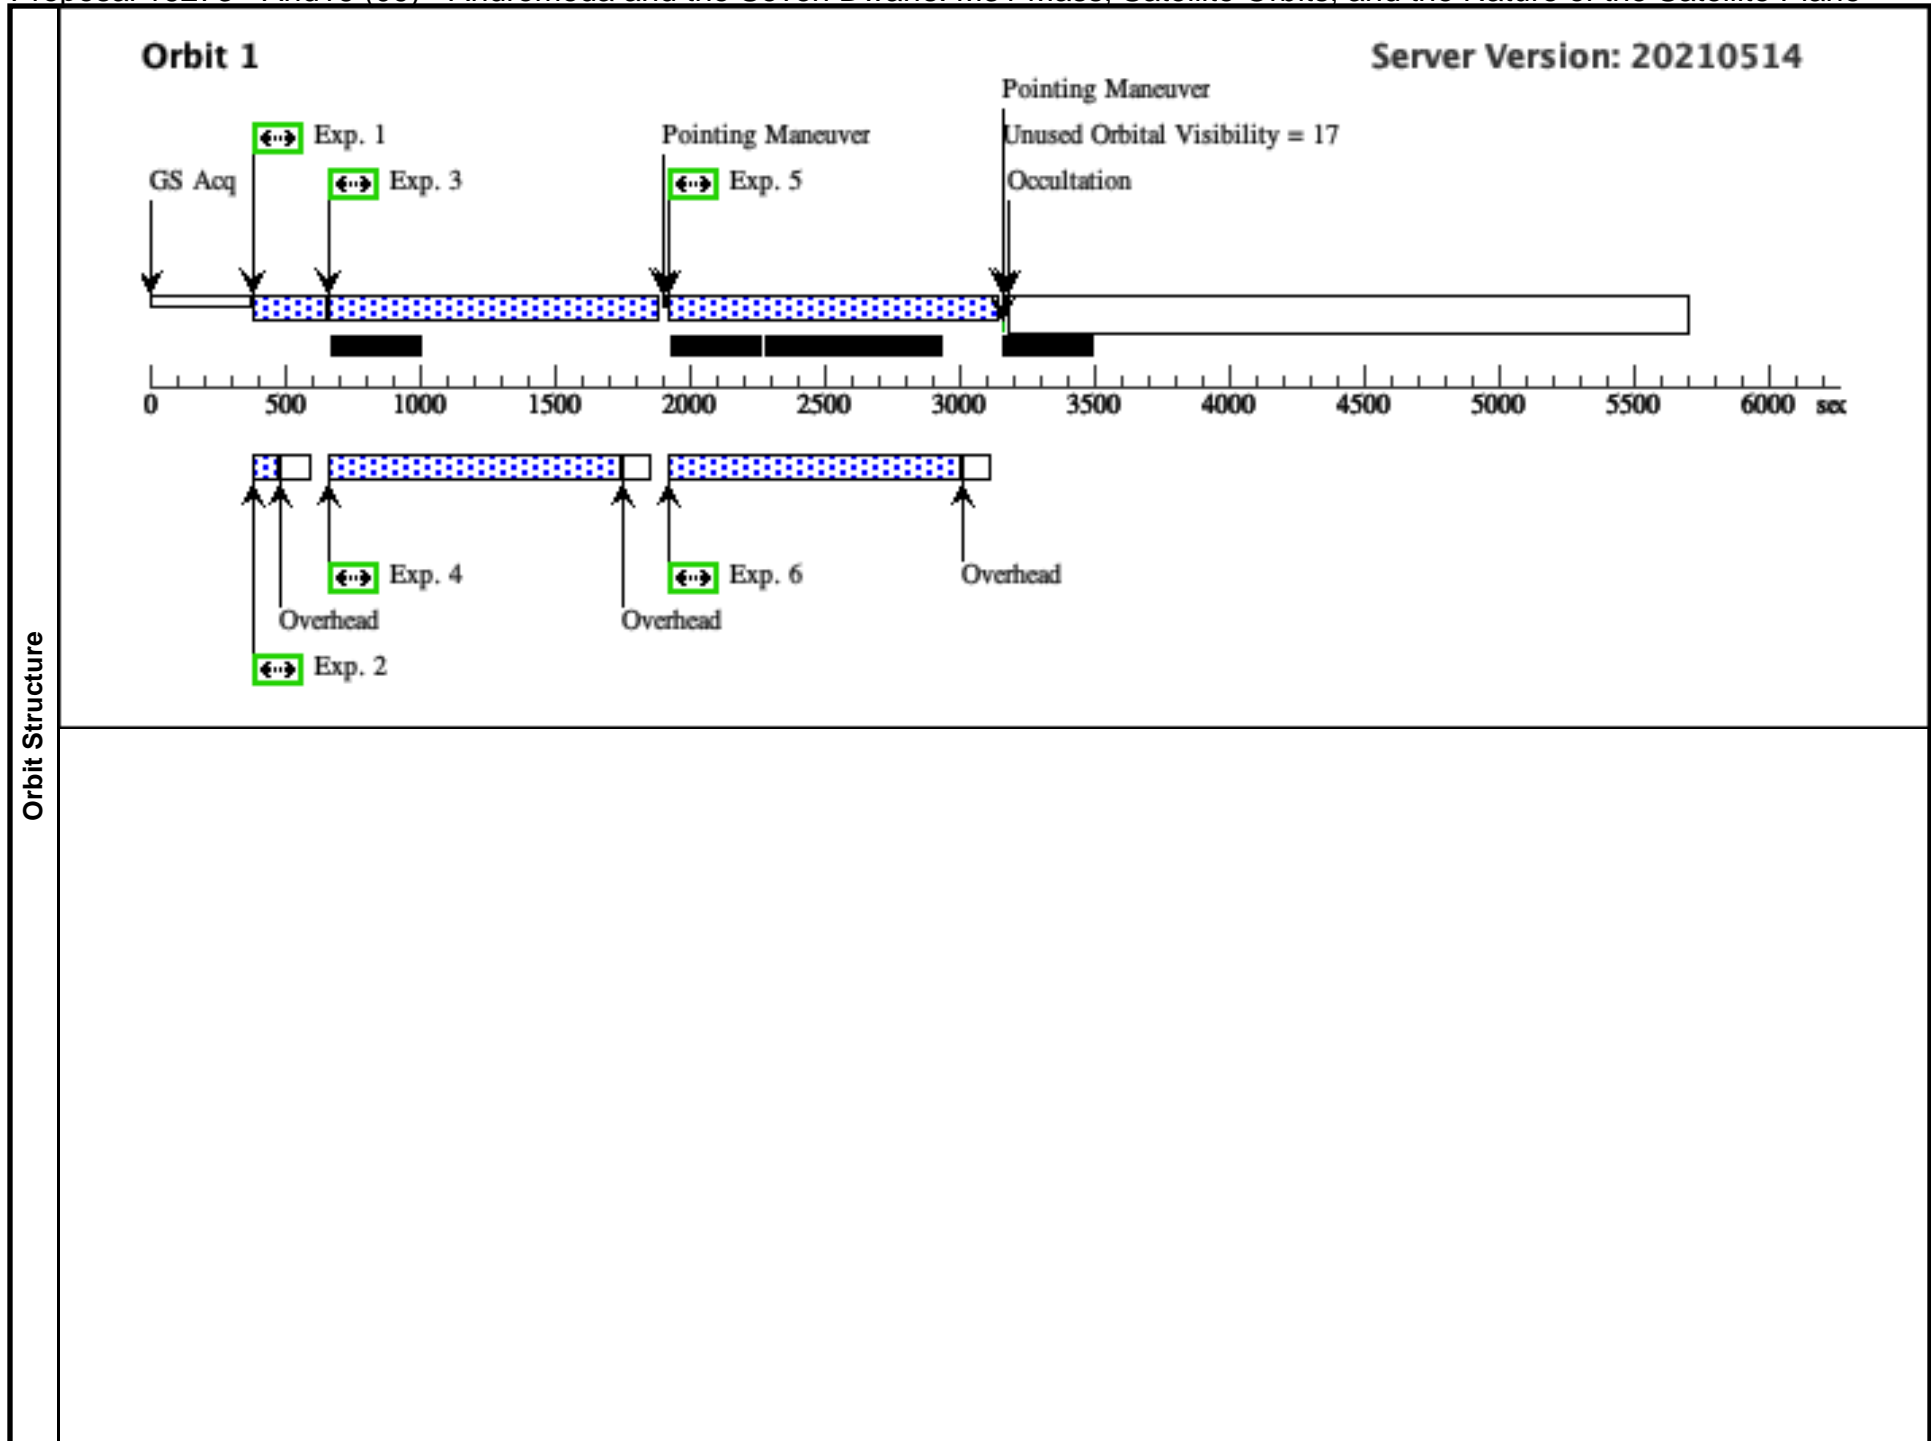

Visit	<p>Proposal 16273, And16 (09), scheduling</p> <p>Diagnostic Status: No Diagnostics</p> <p>Scientific Instruments: WFC3/UVIS, ACS/WFC</p> <p>Special Requirements: ORIENT 100.0D TO 100.0 D; AFTER 01-JAN-2021:00:00:00</p> <p><i>Comments: This is the visit for obtaining second-epoch images of Andromeda XVI. This visit spends 3 orbits in total with ACS/WFC being the primary and the WFC3/UVIS being the parallel instruments. For proper motion measuring purpose, we required to match our telescope orientations to the first-epoch observations for both the primary and parallel fields. We have accordingly added the Visit Orientation Requirements. Our science requires that the time baseline between the previous first- and this cycle's second-epoch is at least 8 years apart (this is specified in the Phase 1 proposal). We therefore added a Timing Requirement of "AFTER 01-JAN-2021:00:00:00".</i></p>

Proposal 16273 - And7-V1 (13) - Andromeda and the Seven Dwarfs: M31 Mass, Satellite Orbits, and the Nature of the Satellite Plane

Sat Nov 13 00:01:15 GMT 2021

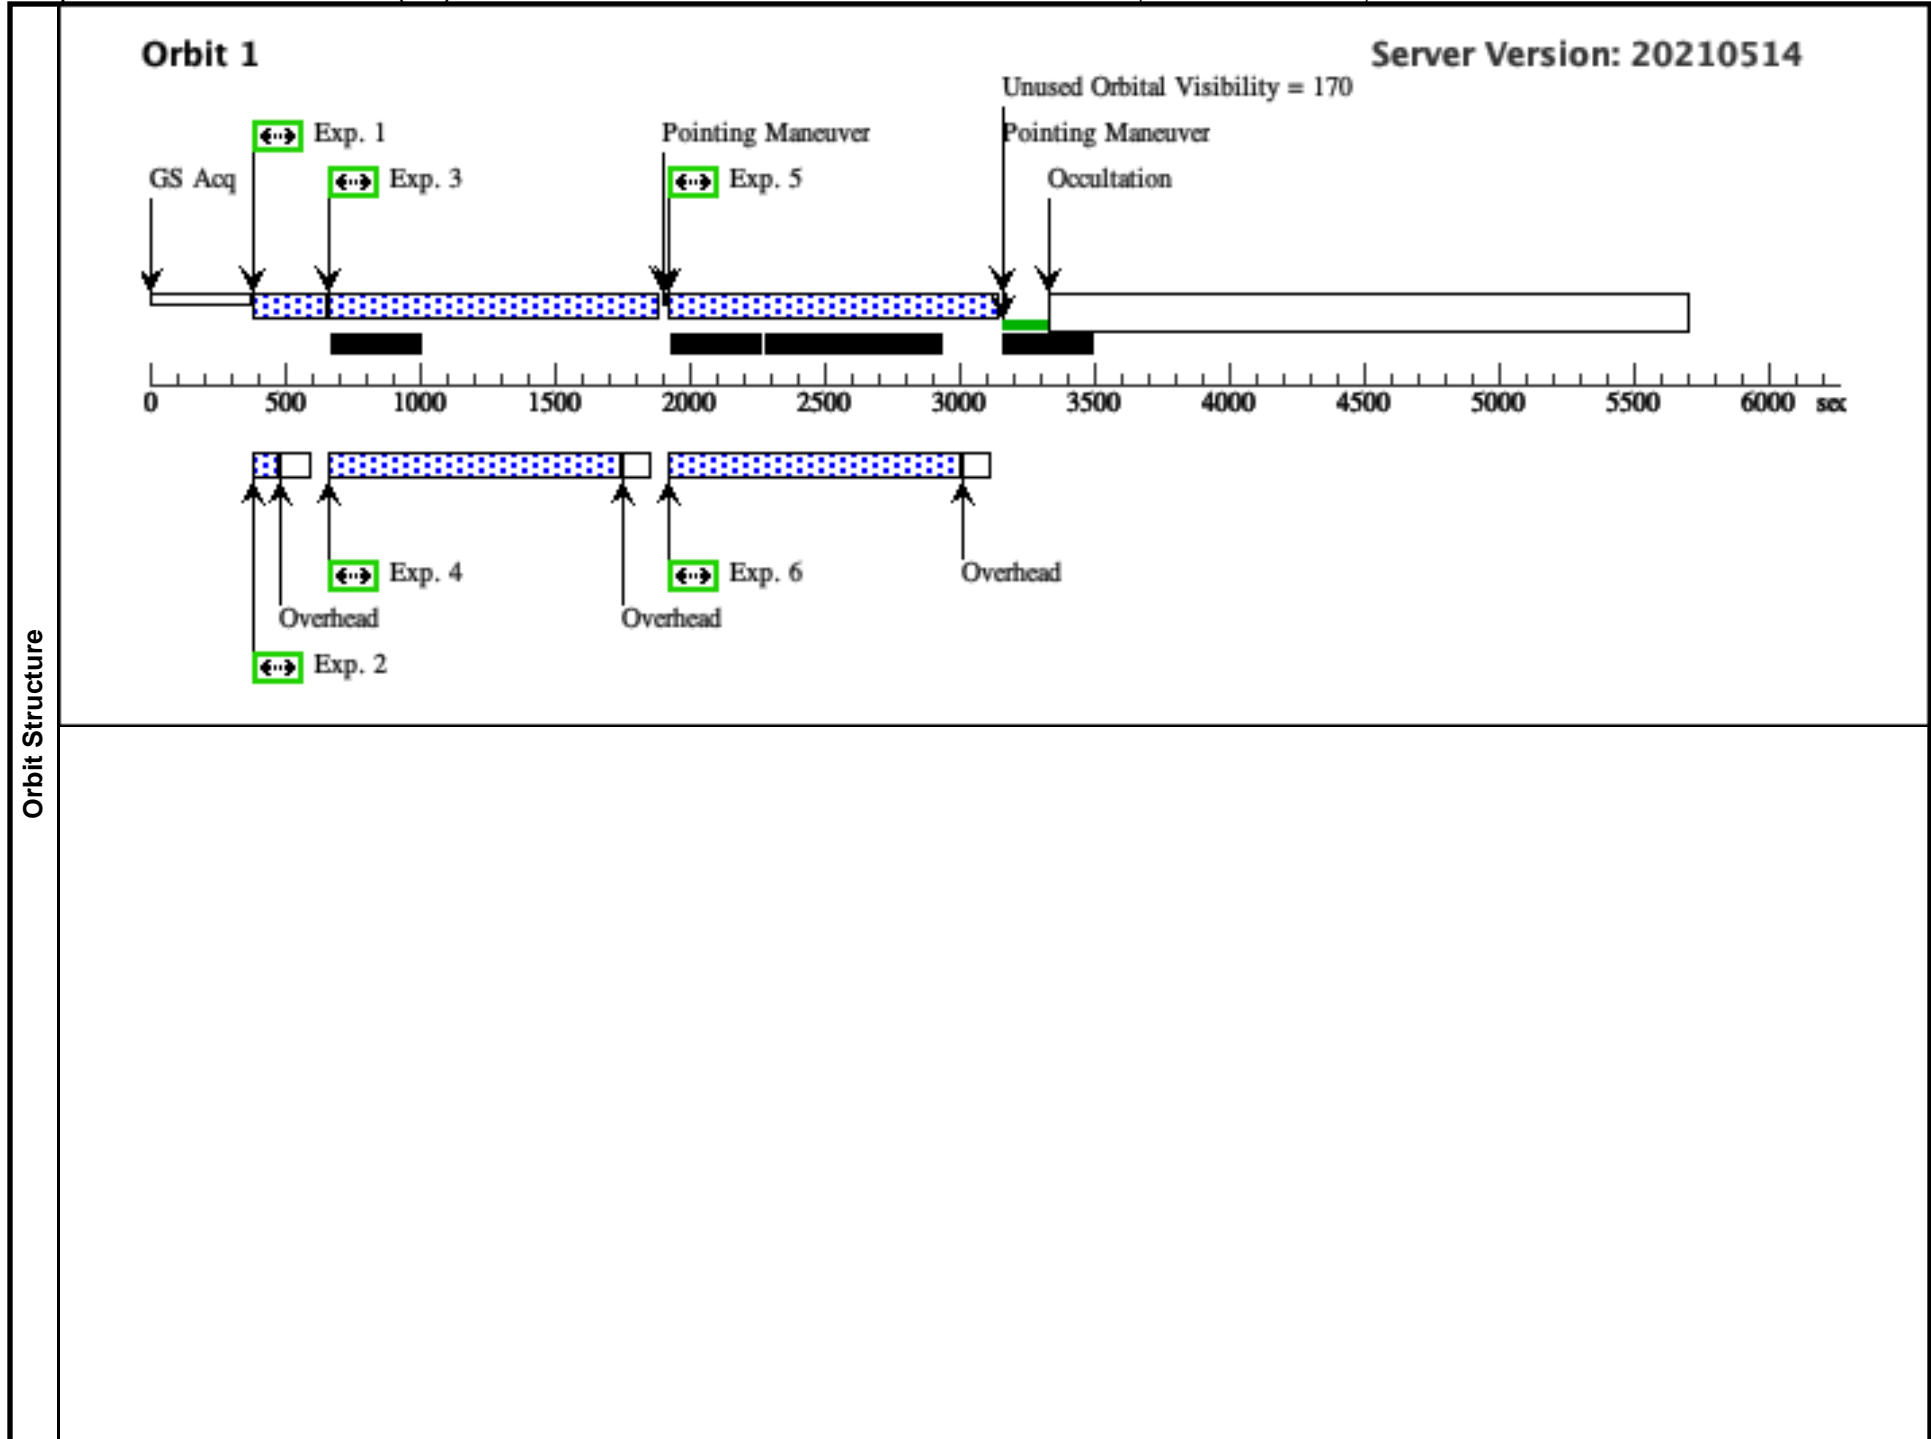

Visit	<p>Proposal 16273, And7-V1 (13), scheduling</p> <p>Diagnostic Status: No Diagnostics</p> <p>Scientific Instruments: WFC3/UVIS, ACS/WFC</p> <p>Special Requirements: ORIENT 251.7D TO 251.7 D; GROUP 13,14 WITHIN 15D</p> <p><i>Comments: This is the first out of two visits for obtaining second-epoch images of Andromeda VII. This visit spends 3 orbits in total with ACS/WFC being the primary and the WFC3/UVIS being the parallel instruments. For proper motion measuring purpose, we required to match our telescope orientations to the first-epoch observations for both the primary and parallel fields. We have accordingly added the Visit Orientation Requirements. We have grouped Visits 13 and 14 and specified these visits to be observed within a 15 day period so that all images can be treated as a single-epoch data for astrometric analyses.</i></p>
