44 Total Orbits Used

ABSTRACT

The Cosmic Assembly Near-IR Deep Extragalactic Legacy Survey (CANDELS) was designed to document the first third of galactic evolution from $z = 8$ to 1.5 via deep imaging of more than 250,000 galaxies with WFC3/IR and ACS. It also discovered the first Type Ia SNe beyond $z > 1.5$ and established their accuracy as standard candles for cosmology. Five premier multi-wavelength sky regions were selected from the Spitzer Extragalactic Deep Survey (SEDS) to provide complementary IRAC imaging data down to 26.5 AB mag, a unique resource for stellar masses at all redshifts. The use of five widely separated fields mitigated cosmic variance and yielded statistically robust and complete samples of galaxies down to 10^9 solar masses out to $z \sim 8$.

The original CANDELS ACS imaging included primarily V- and I-band (F606W and F814W), with no B-band observations. The two CANDELS/Deep fields already had moderately deep F435W imagery taken as part of the GOODS North and South programs (GO 9583 and 9425). None of the three CANDELS/Wide fields had pre-existing F435W coverage. The subsequent GO program UVCANDELS (GO 15647) obtained comparably deep F435W imagery across much of the CANDELS/EGS and CANDELS/COSMOS fields,

Proposal 16872 (STScI Edit Number: 0, Created: Tuesday, November 9, 2021 at 12:01:04 PM Eastern Standard Time) - Overview
but did not target the CANDELS/UDS field.

This program aims to rectify the missing B-band HST imagery in the CANDELS/UDS, the only CANDELS field still lacking F435W. The 44 single-orbit visits of compact-dithered F435W pointings are identically matched to the legacy ACS/WFC CANDELS/UDS footprint, resulting in a consistent HST legacy dataset of BVI imaging for the entire CANDELS Wide mosaic survey.

OBSERVING DESCRIPTION

Mosaic geometry (identically matched to GO-12064): * The mosaic is oriented west-to-east to cover the redshift survey by Almaini et al. * The chosen IR-mosaic overlap is 4%, which yields a minimum overlap of 1% (1.3") in the short direction to defend against estimated pointing errors of ~0.2-0.25" * The ORIENTs of individual tiles are held constant insofar as possible to create an unbroken mosaic. A few tiles have been rotated off-nominal in order to find guide stars.

This uses exclusively filter B = F435W, complementing the original CANDELS Filters of: J = F125W, H = F160W, V = F606W, I = F814W * Due to the overlapping ACS FOV, the *effective* exposure times in ACS are roughly double the single-orbit total * Individual exposure times are adjusted to fit orbit visibility periods * Dithering is ACS-WFC-DITHER-BOX for simplicity and the desired for optimal PSF reconstruction across the full WFC FOV

Timing requirements: * Dates are set to allow ~immediate scheduling in November 2021, and ORIENTs are chosen identically to GO-12064 to maximize ACS overlap with that dataset (and to avoid potential complications with guide-star availability). Any use of "SINGLES" is approved by the PI.
