135 Total Orbits Used

ABSTRACT

The goal for this program is to monitor the degradation of the Charge Transfer Efficiency (CTE) and the efficacy of using post-flash mode over time. These are monitored using a series of WFC3/UVIS darks with NO post-flash taken before and after the monthly UVIS anneal. There is another program that collects post-flashed darks to monitor the hot/warm pixel growth and median dark current of the detector, and so this is a supplementary program to that one, to compare un-flashed internals to these post-flashed ones. When used in conjunction with the post-flashed internals, the un-flashed internals allow for an assessment of how well the post-flash is mitigating the CTE losses.

The products generated from this program include on-going analysis of the post-flash efficacy and an updated report on the CTE degradation over time. This is usually in the form of an ISR.

Prior result is WFC3 ISR 2019-10:

Post-flashed superdarks contain at least 50% more hot pixels, and had 2 e-/hr lower dark current for each anneal cycle.

OBSERVING DESCRIPTION

Ten full-frame four-amp un-flashed 900 sec darks are taken every month. To facilitate scheduling, visits contain 1 dark only (~1400 sec total time, including readout and buffer dump). The darks are grouped around the anneal iterations: 5 darks the week before and 5 darks the week after each procedure.

130 orbits = 13 anneals * 10 orbits per anneal (5 orbits pre-anneal, 5 orbits post-anneal)

Orbit Structure	Orbit 1 Unused Orbital Visibility = 3005 Exp. 1 Occultation The diagram illustrates the timing of an observation within Orbit 1. The x-axis represents time in seconds, ranging from 0 to 6000 with major ticks every 500 seconds. A green horizontal bar indicates the duration of the exposure, starting at 0 seconds and ending at 1000 seconds. An arrow labeled 'Exp. 1' points to the start of this bar. A black horizontal bar is positioned below the green bar, spanning from approximately 1000 to 1400 seconds. An arrow labeled 'Occultation' points to the start of a white horizontal bar at 3000 seconds, which extends to approximately 5700 seconds. The text 'Unused Orbital Visibility = 3005' is located above the green bar, and 'Server Version: 20240604' is in the top right corner of the diagram area. 050010001500200025003000350040004500500055006000 sec

Exposures	#	Label	Target	Config,Mode,Aperture	Spectral Els.	Opt. Params.	Special Reqs.	Groups	Exp. Time (Total)/[Actual Dur.]	Orbit
	1	Unflashed Dark	DARK	WFC3/UVIS, ACCUM, UVIS	DEF	GAIN=1.5			900 Secs (900 Secs) [==>]	[1]
Orbit Structure	Orbit 1 Server Version: 20240604									
	Unused Orbital Visibility = 3005 The diagram illustrates the timing of the observation within Orbit 1. The x-axis represents time in seconds, ranging from 0 to 6000 with major ticks every 500 seconds. A green bar indicates the duration of the exposure, starting at 0 seconds and ending at 1000 seconds. A black bar indicates the occultation period, starting at 1000 seconds and ending at 1300 seconds. A white bar indicates the remaining observation time, starting at 1300 seconds and ending at 5705 seconds. An arrow labeled 'Exp. 1' points to the start of the green bar at 0 seconds. Another arrow labeled 'Occultation' points to the start of the black bar at 1000 seconds.

Orbit Structure	Orbit 1 Unused Orbital Visibility = 3005 Exp. 1 Occultation  The timeline shows a green bar for 'Exp. 1' from 0 to 1000 seconds, a black bar from 1000 to 1350 seconds, and a white bar for 'Occultation' from 3000 to 5700 seconds. The x-axis is labeled from 0 to 6000 seconds.
