200 Total Orbits Used

## **ABSTRACT**

A growing number of blobs, which are small, circular regions with slightly decreased sensitivity, have appeared in WFC3/IR images during WFC3's lifetime. Dark-Earth flats (i.e., observations of the dark side of the Earth) can be used to monitor the number and positions of blobs that appear in IR images due to dust on the channel select mechanism (CSM). These flats provide a high enough background level due to the dark-Earth airglow (~1000 DN - ~3500 DN per pixel in each ~25 second SPARS25 sample for F153M), which make the blobs easier to detect. By limiting the exposure time to 102.9 seconds, we avoid saturating the detector and yet will obtain several 25-sec samples to select from, in case some are contaminated by city lights. In addition to monitoring the number and positions of these blobs on the IR detector, this program will allow us to monitor the repeatability of WFC3's channel select mechanism movements to ensure it does not exhibit anomalous behavior. More information can be found in WFC3 ISR 2018-06 by Sunnquist. In addition, observations are critical for evaluating and updating the WFC3/IR blob convolutional neural network, which identifies new blobs (see WFC3 ISR 2021-08; Dauphin et al.).

## **OBSERVING DESCRIPTION**

Proposal 17692 (STScI Edit Number: 0, Created: Friday, July 26, 2024 at 2:03:36 PM Eastern Standard Time) - Overview

A NSAMP=5 SPARS25 sample sequence with an exposure time of 102.9 seconds is used to obtain the Earth-flats. For this monitoring program, short visits are necessary in order to obtain visits often (typically 2-3 observations per week).

--- Filter Selection ---

To be assured that we don't saturate, e.g. during full moon illumination of a reflective cloud, we do not use a wide-band filter. The narrowband filters are used rarely in the WFC3 science program and they would produce a smaller signal than a medium band filter when observing the dark-Earth. That leaves the medium-band filters. Because we currently have dark-Earth observations only in WFC3/IR's wide filters, one medium band (F153M), and two narrow bands (F164N and F167N), we have selected F153M for this monitor.

--- When to take observations ---

Because we do not wish to exercise the WFC3 CSM unnecessarily, we invite the schedulers to schedule this program following WFC3/IR observations, not WFC3/UVIS observations. Either one will work, but the former is preferred. Also, we require that the CSM to be repositioned between visits of this program, so a WFC3/UVIS program needs to be between each visit of this program.

--- Previous CSM/blob monitoring programs ---

13068, 13499, 13588, 14030, 14392, 14549, 14999, 15592, 15732, 16412, 16587, 17022, and 17371.

--- Additional Comments ---

Following prior practice for this calibration program, we will "use them or lose them" which means that after this program is implemented, all visits of 17371 that have not yet been scheduled shall be canceled and the new program (this one) will pick up where the previous one left off.
