ABSTRACT

We propose Target of Opportunity (ToO) observations for detailed studies of X-ray jets from microquasars. Following the discovery by Chandra of radio/X-ray jets in five microquasars, it becomes clear that X-ray jets are probably much more common than previously thought, and they offer an

Proposal 18185 (STScI Edit Number: 0, Created: Monday, September 29, 2025, 9:00:43AM Eastern Standard Time) - Overview
exciting new way to probe the physics of relativistic jets from black holes and their feedback on the ISM. The proposed ToO observations are optimized to discover and study (flux evolution, morphology, SED, proper motion, ...) new X-ray jets from microquasars, triggered by their detection as radio lobes. This will have implications not only for the study of jets from Galactic X-ray binaries, but also for our understanding of relativistic jets from active galactic nuclei (AGN).

OBSERVING DESCRIPTION

HST observations in the IR will complement the measurements of the extended jets in the radio and X-rays and be used to bridge the gap in the spectral energy distribution. We will use WFC3 with the F160W. The observations will be 1 HST orbit for the first two Chandra observations and 2 HST orbits for the two final observations when we expect the jets to be much fainter and more extended. On each orbit, we will observe with the WFC3/F160W with 2 dither positions. The response for HST is longer than 3 weeks, therefore not constraining for HST. The separation between observations will be approximately by one month, except for the last observation which will 2 months after the third.

Proposal 18185 - Visit 01 - X-Ray Jets in Microquasars

Mon Sep 29 14:00:43 GMT 2025

Visit	Proposal 18185, Visit 01		
	Diagnostic Status: No Diagnostics		
	Scientific Instruments: WFC3/IR		
	Special Requirements: TOO RESPONSE TIME 21.0D		

Patterns	#	Primary Pattern	Secondary Pattern	Exposures
	(1)	Pattern Type=WFC3-IR-DITHER-LINE Purpose=DITHER Number Of Points=2 Point Spacing=0.636 Line Spacing=	Coordinate Frame=POS-TARG Pattern Orientation=41.788 Angle Between Sides= Center Pattern=false	

Generic Targets	#	Name	Criteria	Description
	(1)	XRAY-JETS	Discovery of a new, variable radio source at least 2 arcsec from a known black hole candidate.	

Exposures	#	Label	Target	Config,Mode,Aperture	Spectral Els.	Opt. Params.	Special Reqs.	Groups	Exp. Time (Total)/[Actual Dur.]	Orbit
