ABSTRACT

Perform routine monitoring of FUV XDL detector dark rates. The main purpose is to look for evidence of a change in the dark rate, both to track on-orbit time dependence and to check for a detector problem developing. Variations of count rates as a function of orbital positions will be analyzed to study the effect of SAA. Stacked images will help us study the spatial distribution of dark rates on the detector.

OBSERVING DESCRIPTION

Monitor the FUV detector dark rate by taking science exposures with no light on the detector. Six 22-minute exposures are taken with the FUV detector with the shutter closed each week. The length of the exposures is chosen to make them fit in Earth occultations.
