104 Total Orbits Used

ABSTRACT

This program is a smaller version of our routine CCD monitoring program, designed to run throughout SMOV, after which our regular Cycle 17 CAL proposal will begin. This program obtains the bias and dark frames needed to generate reference files for calibrating science data, and allows us to monitor detector noise and the growth of hot pixels.

OBSERVING DESCRIPTION

This program executes every other day, with four visits on each day. Each visit contains a sequence of 1 bias frame plus 1 dark frame. The WFC darks are 1000 seconds long. No compression is applied to bias or dark frames. This procedure is carried out purely with internal targets. We would normally obtain HRC darks as auto-parallels, but we have turned off auto-parallels during SMOV. We will obtain HRC bias and dark frames in a companion program 11511.

ADDITIONAL COMMENTS

This program should not start until after the completion of the first CCD annealing (11367), the temperature set point program (11368), the "oscilloscope mode" (o-mode) program, and the CCD functional test program (11369). This proposal contains enough epochs to cover the full 7 weeks of SMOV, but the length of the o-mode program may reduce the necessary duration of this program to 4 weeks.

The diagram shows a horizontal timeline from 0 to 5500 seconds. A green bar starts at 0 and ends at approximately 1400 seconds. Below this bar, two black bars represent occultations: one from approximately 300 to 500 seconds, and another from approximately 1500 to 1700 seconds. At 3000 seconds, a white bar begins, extending to approximately 5500 seconds. An arrow labeled 'Exp. 1' points to the start of the green bar at 0 seconds. An arrow labeled 'Exp. 2' points to the start of the green bar at approximately 300 seconds. An arrow labeled 'Occultation' points to the start of the white bar at 3000 seconds. The x-axis is labeled with values from 0 to 5500 in increments of 500, with 'sec' at the end.

The diagram shows a horizontal axis representing time in seconds, ranging from 0 to 5500 with major ticks every 500 seconds. A green bar starts at 0 seconds and ends at approximately 1400 seconds. Below this bar, there are two black rectangular blocks: one from approximately 400 to 600 seconds, and another from approximately 1500 to 1700 seconds. At the 3000-second mark, a vertical arrow points down to the word 'Occultation'. Above the green bar, two vertical arrows point down to 'Exp. 1' at 0 seconds and 'Exp. 2' at approximately 300 seconds.

The diagram shows a horizontal timeline from 0 to 5500 seconds. A green bar representing exposure 1 starts at 0 and ends at approximately 1400 seconds. A black bar representing exposure 2 starts at 300 seconds and ends at 600 seconds. A white bar representing occultation starts at 3000 seconds and ends at 5500 seconds. Arrows point to the start of each bar with labels 'Exp. 1', 'Exp. 2', and 'Occultation'. The x-axis is labeled 'sec' and has major ticks every 500 units.

Orbit Structure									
Orbit 1 Unused Visibility = 3028					Server Version: 20090130				
<p>The diagram shows a timeline for Orbit 1. The x-axis represents time in seconds, ranging from 0 to 6000 with major ticks every 500 seconds. A green bar from 0 to approximately 1400 seconds represents the first exposure (Exp. 1). A second, shorter green bar from approximately 250 to 400 seconds represents the second exposure (Exp. 2). A white bar from approximately 3000 to 5800 seconds represents the occultation period. Two black bars are shown below the green bars, likely representing dark frames or gaps. Arrows point to the start of Exp. 1, Exp. 2, and the occultation period.</p>
