24 Total Orbits Used

ABSTRACT

This proposal is designed to monitor the stability of the UVIS detector as well as the tungsten lamp through cycle 18.

OBSERVING DESCRIPTION

Every 2 months we will execute 4 internal orbits each - 2 tungsten lamp and 2 deuterium lamp. These will be carried out over a period of 12 months till the end of cycle 18.

Visits ending in 1 or 2 are tungsten lamp exposures

Visits ending in 3 or 4 are deuterium lamp exposures

The visits are designed to cover the full UVIS spectral range of the detector.

ADDITIONAL COMMENTS

The D2 lamp degrades with power cycles and total on-time, so it is requested that the lamp be turned on and off as little as possible, but should not be on for more than ~90 minutes. Also, using the lamp with the high current setting degrades the lamp faster, therefore in this proposal only the medium current is used.
