16 Total Orbits Used

**ABSTRACT**

This program determines which cross-dispersion locations lead to wavecal lamp (PtNe) light leaking through the flat-field calibration aperture (FCA). This unexpected effect, observed initially in program 12096, led to a shut down of the COS/FUV detector due to a global count rate violation in Segment A of the G140L/1230 setting. Detector threshold is 600,000 FEC counts in 10 seconds on each segment. If this level is exceeded, the detector shuts down the HV.

In program 12096, for the G140L/1230 setting, at +6" from the nominal position in the cross-dispersion direction, 180,000 cts/sec were observed through the FCA in Segment A, and 49,000 cts/sec in Segment B (PtNe/FCA). The corresponding wavecal count rate (PtNe/WCA) is 685 cts/sec in

## Proposal 12677 (STScI Edit Number: 5, Created: Friday, September 2, 2011 8:20:51 PM EST) - Overview

Segment A, implying that there is a scale factor of 263 between the FCA and WCA count rates. This scale factor could not be verified for Segment B, given that the PtNe lamp does not produce counts at the short wavelengths seen by G140L/1230/FUVB. However, this scaling factor is expected to be the same for both segments.

The scaling factor derived from program 12096 is then used to predict the FCA count rates seen with all the gratings, in off-nominal positions where light might leak through the FCA in the current program.

There is no light leak between the nominal position and positions up to and including +3" (at least not in Mar 2010 when program 12096 executed), but somewhere above +3" and certainly at +6" the PtNe light starts leaking through the FCA.

Light is not predicted to leak at negative POS-TARG positions from the nominal, and the purpose of this program is to verify that as well.

Visits 1N to 6N take data at positions from +1.0" to +6.0", while visits 1S to 6S take data at positions from -1.0" to -6.0". Visits 10 through 13 take data at the nominal position, 0.0".

At each position in the detector data is taken with the following settings:

G130M/1055/1291/1327, G160M/1577/1623, and G140L/1280/1105, in this order.

LAMP2 with CURRENT=LOW is used in all of these visits. In addition, at each position, one exposure with LAMP1 CURRENT=MED is also taken with the G130M/1055 setting, which leads to total counts in 10 sec more than a factor of 10 below the 600,000 limit. This exposure is used so that the ratio of LAMP1/MED to LAMP2/LOW can be calculated for the FCA at each position (in conjunction with the data obtained in visits 11, 12, and 13; see below). In addition, the G130M/1055 exposures with LAMP1/MED and LAMP2/LOW will be used to determine if the lamp spot size is changing at each position.

Depending on the total counts estimated for each setting, either a typical wave exposure is taken or special flash commands are used. Details are given in each visit.

Exposures obtained with LAMP1/CURRENT=LOW are expected to have a ~20% smaller count rate than exposures obtained with LAMP1/CURRENT=MED. Exposures obtained with LAMP2/CURRENT=MED are expected to have count rates similar to those obtained with LAMP1/CURRENT=MED, and exposures obtained with LAMP2/CURRENT=LOW are expected to have a count rate which is ~1/7 of that obtained with LAMP2/CURRENT=MED.

VISIT 10 OBTAINS LAMP1/CURRENT=MED+ LOW SPECTRA AT ALL THE M SETTINGS USED IN THIS PROGRAM, AT THE NOMINAL POSITION (0.0").

Proposal 12677 (STScI Edit Number: 5, Created: Friday, September 2, 2011 8:20:51 PM EST) - Overview

VISIT 11 OBTAINS LAMP2/CURRENT=MED SPECTRA AT ALL THE M SETTINGS USED IN THIS PROGRAM, AT THE NOMINAL POSITION (0.0").

VISIT 12 OBTAINS LAMP2/CURRENT=LOW SPECTRA AT ALL THE M SETTINGS USED IN THIS PROGRAM, AT THE NOMINAL POSITION (0.0").

VISIT 13 OBTAINS LAMP1/CURRENT=MED, LOW AND LAMP2/CURRENT=MED, LOW SPECTRA AT ALL OF THE L SETTINGS USED IN THIS PROGRAM,  
AT THE NOMINAL POSITION (0.0").

THE GOAL OF THESE VISITS IS TO DETERMINE THE RATIOS OF THE DIFFERENT LAMP SETTINGS AT DIFFERENT WAVELENGTHS, TO HELP IN ANALYZING THE DATA OBTAINED IN VISITS WHERE ONLY LAMP2/LOW IS USED.

ALSO, THESE DATA WILL BE USED TO PREDICT WHAT THE COUNTS WOULD BE WITH G140L/1280/LAMP1/MED AT THE +6.0" POSITION (VIS6N, WHERE LAMP2/LOW IS USED). THESE COUNTS WILL BE COMPARED WITH THE COUNTS OBTAINED IN PROGRAM 12096 WITH G140L/1230/LAMP1/MED, MORE THAN ONE YEAR AGO, TO LOOK FOR VARIABILITY, POSSIBLY INDICATING CHANGES TO THE LAMP SPOT SIZE.

Visits 10 through 13, all executed at the nominal position, pose no safety concerns.

#### CONSTRAINTS:

- Visits 1N, 2N, 3N can be executed back to back as no light is expected to leak through the FCA. Visit 1N should execute before visit 2N, which should execute before visit 3N.

- Visits 1S, 2S, and 3S can be executed back to back and do not have constraints relative to the other visits. Visit 1S should execute before visit 2S, which should execute before visit 3S

- Visits 10, 11, 12, and 13 (data obtained at nominal position), can also be executed back to back and have no constraints relative to other visits. However, these visits should be scheduled as soon as possible, because results of data analysis will be used to inform execution of program 12678.

- There should be an interval of at least two days between any of the visits mentioned above and the other visits in this program (4N, 5N, 6N, 4S, 5S,

6S) which could see light leaking through the FCA.

- Visits 4S and 4N can be scheduled in the same week, but they don't need to be.
- Visits 5S and 5N can be scheduled in the same week, but they don't need to be.
- There should be an interval of at least 3 weeks between visit 4N and visit 5N.
- Visits 6S and 6N can be scheduled in the same week, but they don't need to be.
- There should be an interval of at least 3 weeks between visit 5N and visit 6N.
- Visits 1S through 5S should be scheduled as soon as possible, the same is true for visits 1N to 4N.

#### **OBSERVING DESCRIPTION**

This program maps stray light from the PtNe lamp that goes through the FCA when the aperture is moved in the cross-dispersion direction.

Settings used in this program are:

G130M/1055/FP-POS=4

G130M/1291/FP-POS=3

G130M/1327/FP-POS=1

G140L/1105/FP-POS=4

G140L/1280/FP-POS=1

G160M/1577/FP-POS=4

G160M/1623/FP-POS=1

#### **ADDITIONAL COMMENTS**

Proposal 12677 (STScI Edit Number: 5, Created: Friday, September 2, 2011 8:20:51 PM EST) - Overview

ISQL is required to bypass calibration for exposures using G130M with the 1055 central wavelength. See exposure level comments.

**Visit**  
**Proposal 12677, Visit 11, completed**  
**Diagnostic Status: No Diagnostics**  
 Scientific Instruments: COS/FUV  
 Special Requirements: (none)  
*Comments: THIS VISIT OBTAINS LAMP2/MED CURRENT SPECTRA AT ALL THE M SETTINGS USED IN THIS PROGRAM, AT THE NOMINAL POSITION (0.0"). THE GOAL OF THIS VISIT IS TO BE ABLE TO DETERMINE THE RATIOS OF THE DIFFERENT LAMP SETTINGS AT DIFFERENT WAVELENGTHS, TO HELP IN ANALYZING THE DATA OBTAINED IN VISITS WHERE ONLY LAMP2/LOW IS USED.*  
*This visit should be scheduled as soon as possible, because results of data analysis will be used to inform execution of program 12678*

Proposal 12677 - Visit 13 - COS/FUV Mapping of Stray PtNe Lamp Light Through FCA

Sat Sep 03 01:21:00 GMT 2011

**Visit**

**Proposal 12677, Visit 13, scheduled**

**Diagnostic Status: Warning**

Scientific Instruments: COS/FUV

Special Requirements: (none)

*Comments: THIS VISIT OBTAINS LAMP1/MED/LOW AND LAMP2/MED/LOW CURRENT SPECTRA AT ALL OF THE L SETTINGS USED IN THIS PROGRAM, AT THE NOMINAL POSITION (0.0"). THE GOAL OF THIS VISIT IS TO BE ABLE TO DETERMINE THE RATIOS OF THE DIFFERENT LAMP SETTINGS AT DIFFERENT WAVELENGTHS, TO HELP IN ANALYZING THE DATA OBTAINED IN VISITS WHERE ONLY LAMP2/LOW IS USED.*

*ALSO, THESE DATA WILL BE USED TO PREDICT WHAT THE COUNTS WOULD BE WITH G140L/1280/LAMP1/MED AT THE +6.0" POSITION (VIS6N, WHERE LAMP2/LOW IS USED). THESE COUNTS WILL BE COMPARED WITH THE COUNTS OBTAINED IN PROGRAM 12096 WITH G140L/1280/LAMP1/MED, MORE THAN ONE YEAR AGO, TO LOOK FOR VARIABILITY, POSSIBLY INDICATING CHANGES TO THE LAMP SPOT SIZE.*

*This visit should be scheduled as soon as possible, because results of data analysis will be used to inform execution of program 12678*

**Diagnostics**
