**ABSTRACT**

Perform routine monitoring of FUV XDL detector dark rate. The main purpose is to look for evidence of a change in the dark rate, both to track on-orbit time dependence and to check for a detector problem developing. Variations of count rates

as a function of orbital positions will be analyzed to study the effect of SAA.

Stacked images will help us study the spatial distribution of dark rates on the detector.

### **OBSERVING DESCRIPTION**

Monitor the FUV detector dark rate by taking TIME-TAG science exposures with no light on the detector. Five times every two weeks a 22-min exposure is taken with the FUV detector with the shutter closed. The length of the exposures is chosen to make them fit in Earth occultations.
