156 Total Orbits Used

ABSTRACT

This program continues the CCD anneal cycle that has taken place every 4 weeks for the last 5 observing cycles. We obtain WFC biases and darks before and after the anneal in the same sequence as done for the ACS daily monitor. The anneal observation supplements the monitor observation

sets during the appropriate week.

OBSERVING DESCRIPTION

The pre-anneal bias and dark frames are taken within 12 hours of starting the anneal. The anneal itself is then run for 12 hours. After returning to operational mode, another set of bias and dark frames are taken within the next 12 hours. The whole procedure is repeated every 4 weeks, i.e, 13 times during Cycle 19.

CALIBRATION JUSTIFICATION

Annealing is required to reduce the number of hot pixels on the CCDs. Hot pixels are steadily generated by high energy radiation striking the detectors. Bias and dark images are collected to monitor the efficiency of the anneal and track the time needed for the bias level to equilibrate.

ADDITIONAL COMMENTS

All data is obtained using internal targets only, so all exposures should be taken during Earth occultations. SAA passages should be avoided.

Proposal 12732 - Visit AA - CCD Hot Pixel Annealing

Wed Oct 05 01:41:15 GMT 2011

Visit	Proposal 12732, Visit AA

The diagram shows a horizontal timeline from 0 to 5500 seconds. A green bar represents the total observation time, starting at 0s and ending at approximately 3200s. Two arrows labeled 'Exp. 1' and 'Exp. 2' point to the start of the green bar at 0s and approximately 250s, respectively. A black bar below the green bar indicates occultation, starting at approximately 3200s and ending at approximately 5500s. The x-axis is labeled 'sec' and has major ticks every 500 units.

The diagram shows a horizontal timeline from 0 to 5500 seconds. A green bar starts at 0s and ends at approximately 3200s. Two arrows labeled 'Exp. 1' and 'Exp. 2' point to the start of the green bar at 0s and approximately 250s, respectively. A black bar labeled 'Occultation' starts at approximately 3200s and extends to the end of the timeline. The x-axis is labeled 'sec' and has major ticks every 500 units.
