ABSTRACT

This program will perform an initial checkout of the NUV channel after switching the instrument to use the Side 2 electronics. The location of the aperture will be checked using the internal wavecal lamp, and an NUV focus run will be made to verify that the focus has not changed.

OBSERVING DESCRIPTION

This program consists of two visits.

Visit 01 (Internal):

Images of the wavecal lamp will be taken at the nominal Side 2 aperture position, plus at offset positions in both dispersion and cross-dispersion direction in order to verify that the images and spectra will fall within the same subarrays used on Side 1.

Visit 02 (External): An NUV focus sweep will be done to verify that the focus is at the expected location. This is based on the one done in Program 11469. See ISR 2010-04

----- Additional Comments -----

Scheduling constraints:

*This program should execute after program 13189 (COS Side 2 NUV Detector Recovery After MEB Side Switch) completes.

** following a success oriented approach this version of the program removes constraints between visits in this program and changes the ID of the program used in the only remaining constraint - C. Oliveira **

Brief Summary of Analysis Plan:

Visit 01: The location of the reference spot at (0",0") will be measured and compared to the nominal location from side 1. The side 1 data used for the comparison should be from a target acquisition image using MIRRORA/PSA obtained as closely as possible in time to the side 2 data. This is because there is a secular motion of the lamp spot along both the dispersion and cross-dispersion directions. The analysis will take into account that there is a scatter in the position of the image of the wavecal from exposure to exposure. At the time of writing this scatter is approximately +/-30 pix in the dispersion direction, and +/-3 pix in the cross-dispersion direction.

Visit 02: To verify that the focus remains unchanged the FWHM of the spots on the detector as a function of focus offset will be measured and compared to data obtained in program 11469 in SMOV. Note that an NUV focus sweep will be executed in the Cycle 21 calibration program to verify that the NUV focus has not changed since SMOV. The analysis of side 2 data should take the results of the Cycle 21 program into account.

May 2019: One Gyro Contingency Visits Added:

One additional contingency visit was added to this program, which contains a target that can be used if HST is operating in one-gyro mode and NGC188-41 is not visible. Under one-gyro mode, NGC188-41 is not continuously visible. The target added (IDK-M002) was chosen to have visibility windows that complement NGC188-41 under one-gyro operations, such that this program can be executed at any time. The comparison data for the focus sweep using the new target was obtained in Program 15681 (PI Sahnou).

PLEASE NOTE:

- If HST is operating under three-gyro mode, do NOT execute contingency visit 03.
- If HST is operating under one-gyro mode at the time of Side-1 electronics failure, AND NGC188-41 is not visible, execute contingency Visit 03 , along with Visit 01.

Proposal 13192 - Wavecal Exposures (01) - COS Side 2 Initial NUV Channel Checkout

Visit	<p>Proposal 13192, Wavecal Exposures (01), implementation Wed Feb 16 17:00:28 GMT 2022</p> <p>Diagnostic Status: Warning</p> <p>Scientific Instruments: COS, COS/NUV</p> <p>Special Requirements: (none)</p> <p><i>Comments: This visit will verify that the aperture is in the right location, and will collect exposures at several offset positions to allow it to be adjusted if it isn't.</i></p>
Diagnostics	<p>(Wavecal Exposures (01)) Warning (Orbit Planner): MAXIMUM DURATION EXCEEDED FOR INTERNAL OR EARTH CALIB SU</p>

Proposal 13192 - NUV Focus Sweep: NGC188-41 (02) - COS Side 2 Initial NUV Channel Checkout

Wed Feb 16 17:00:28 GMT 2022

Visit

Proposal 13192, NUV Focus Sweep: NGC188-41 (02), implementation
Diagnostic Status: Warning
 Scientific Instruments: COS, COS/NUV
 Special Requirements: SCHED 100%
Comments: This visit will test the NUV ACQ/IMAGE to verify that it works. It will also do a fine focus sweep modeled on Program 11469 Visit 94. From ISR 2010-04, the PSF FWHM should change by a factor of two or so over a +/-200 step range.
The target, NGC188-41, was used in 11469 NUV Focus sweep. A Visit Planner run in March 2013 shows that it is visible all year. Target visibility will have to be rechecked if operating conditions change, e.g. if there are gyro failures which change the observatory pointing capabilities.
Note that APT has a spurious warning for focus sweeps: "This visit contains an ALIGN/OSM exposure which should be preceded by an FUV science exposure to define the starting position for the scan."

Diagnostics

(NUV Focus Sweep: NGC188-41 (02)) Warning (Form): This visit contains an ALIGN/OSM exposure which should be preceded by an FUV science exposure to define the starting position for the scan.

#	Name	Target Coordinates	Targ. Coord. Corrections	Fluxes	Miscellaneous
(1)	NGC188-41 Alt Name1: VID-1316-ZZZZ-PLATE	RA: 00 45 56.6230 (11.4859292d) Dec: +85 17 28.85 (85.29135d) Equinox: J2000	Proper Motion RA: -0.003 sec of time/yr Proper Motion Dec: -0.013 arcsec/yr Epoch of Position: 2000	V=14.21+/-0.2 B-V=0.46 GaleX NUV Flux=149 ; GaleX NUV mag=18.47 E(B-V)=0.089; (B-V)intrinsic = 0.37	Reference Frame: ICRS
<p><i>Comments: This target was used in Program 11469. The following information is from the Phase II of that program:</i> GALEX J004557.4+851728 obj id 2710790968 559273041 E(B-V)=0.0888 GALEX NUV flux = 149.11 +/-8.6975 GALEX NUV mag 18.4662 +/- 0.0633 actual coordinates used from GSC1 plate ZZZZ courtesy Matt Lallo proper motion from plate ZZZZ (and Matt Lallo) assumption is values in supporting table are sec time per year and sec arc per year This target is on NGC-188 GSC1 special astrometric plate ZZZZ and has astrometric coordinates. This star is star 41 on special plate ZZZZ. See above comment about proper motion. Keyes and Lallo have inspected plate ZZZZ and Lallo determined (25 June 2008) that there are numerous available potential guide stars for this target. ----- Using the above information, the ETC has been run with the following parameters: Spectrum: Castelli-Kurucz Models F2V 7000 4.0 Extinction E(B-V): Milky Way Diffuse (Rv=3.1) = 0.09 applied before normalization Normalization: Renormalized to Johnson V = 14.21 in magnitudes relative to Vega The result was COS.im.467283. This gave a count rate of 353 c/s, background rate = 1 c/s, brightest pixel = 49 c/s, count rate over the entire detector = 1394, SNR = 145 in 60 seconds, BUFFER-TIME = 1691. If I use the GALEX NUV Magnitude instead of the V magnitude (COS.im.467312), it gives rate = 220 c/s, brightest pixel = 31, count rate over entire detector = 1262, SNR = 115 in 60 seconds, BUFFER-TIME = 1869. For completeness, I used the same parameters for an ACQ/IMAGE ETC run (COS.ta.467306) using the V magnitude and got essentially the same results. Category=STAR Description=[F3-F9] Extended=NO</p>
