ABSTRACT

This proposal will acquire the data necessary to investigate the behavior of CTE in UVIS subarrays, assess the efficacy of the pixel-based CTE correction as applied to subarrays, and measure the bias levels within each subarray mode.

OBSERVING DESCRIPTION

The current CTE algorithm has been developed and optimized for use with full-frame four-amp readouts. Subarrays do not have the same readout timing as full-frame exposures and thus CTE losses are likely to manifest differently in subarrays than in full-frames. This program acquires the data necessary to evaluate the CTE losses and to test the pixel-based CTE correction in subarrays. In addition, the biases will allow for a measure of the bias level in each subarray mode: correct bias levels are crucial for computing the appropriate CTE correction. Subarray bias levels have typically been taken to be the same as in full-frames but recent analysis has found offsets in some modes (~1-2 e⁻). The results from this program will benefit all UVIS subexposures requiring a CTE correction.

One 1800 sec internal orbit is sufficient to acquire a) one 900 sec post-flashed subarray dark plus 4-6 subarray biases, depending on size, or b) biases in all supported subarray modes. To obtain 1 dark plus a handful of biases in each subarray mode requires 15 a-type orbits. We propose one such set as early in the cycle as possible with a second iteration late in the cycle. More frequent monitoring throughout the cycle is done with the b-type orbits, all biases, one orbit per month, overlapping with the a-type orbits early and late in the cycle. The subarray biases will not be post-flashed as the intent is to investigate the CTE correction itself, not generate reference files.

Orbits required: 42 total (= 1 a-type orbit x 15 subarray modes x 2 in cycle + 1 b-type orbit per month x 12 months)

Visits 1-15 are the first set of dark+bias orbits to be taken early in Cycle 22.

Visits 51-65 the second set for later in the cycle.

Visits 81-92 are the bias-only orbits, one per month.
