135 Total Orbits Used
ABSTRACT
Temporal changes in CTE losses and the efficacy of the post-flash mode are monitored by a series of non-postflashed WFC3/UVIS darks taken before and after the monthly WFC3/UVIS anneal procedures which are performed in program 14000. A large number of internals are taken as part of a daily monitor of warm/hot pixel growth and readnoise (programs 14002, 14003, and 14004), however they are all post-flashed. Thus, a small number of un-flashed internals are required to monitor the changes in CTE losses over time. These un-flashed internals, in conjunction with the post-flashed internals, will allow for an assessment of how well the post-flash is mitigating the CTE losses. This is a continuation of the cycle 22 unflashed monitor program (14005).

OBSERVING DESCRIPTION
Ten full-frame four-amp un-flashed 900 sec darks are taken every month. To facilitate scheduling, visits contain 1 dark only (~1400 sec total time, including readout and buffer dump). The darks are grouped around the anneal iterations: 5 darks the week before and 5 darks the week after each procedure.
