ABSTRACT

This program provides internal lamp flat observations to be carried out during slews. These observations allow a direct comparison with ground-based data taken in the CV3 and OTIS testing to see whether the detector properties have changed. This continues program 1503 from cycle 1 and program 4472 from cycle 2.

This calibration program may change in response to system developments and the final Cycle 3 science program.

OBSERVING DESCRIPTION

The observations in the program are individual internal lamp exposures through the different NIRISS imaging filters. These observations done during slews in the hope that few stars will be "seen" in the images and thus to save time on the observations. The exposures are the same as was used in CV3 ground testing and in cycles 1 and 2, and will be directly compared with the previous observations to determine if there are overall changes in the detector properties.

TIMING CONSTRAINTS

Each group of 12 observations (1-12, 14-25, 27-38, and 40-51) constitutes one set of internal flat observations. The plan is to do these observation sets at intervals of about 3 months through the year. Each set of 12 observations has a 1 month window, and there is then there is a gap before the time window for the next set.

There is some flexibility in the scheduling as long as the full sets of exposures are done within cycle 3. In particular the first set can be spaced out over a somewhat longer period of time if needed. As the observations are individually relatively short it is assumed that the scheduling in the slews will be easy to accommodate in a one month period. The range of the times available for scheduling the sets can be increased if needed.

Proposal 6654 - Observation 1 - CAL-NIS-303: NIRISS Internal Flats
