We propose the COSMOS-Web Survey, an ambitious treasury program to map a contiguous 0.6 deg$^2$ area with deep NIRCam imaging in 4 filters and a 0.2 deg$^2$ deep MIRI survey in parallel. COSMOS-Web will accomplish the following science goals that simply cannot be done with any other

### ABSTRACT

We propose the COSMOS-Web Survey, an ambitious treasury program to map a contiguous 0.6 deg$^2$ area with deep NIRCam imaging in 4 filters and a 0.2 deg$^2$ deep MIRI survey in parallel. COSMOS-Web will accomplish the following science goals that simply cannot be done with any other
existing or currently planned survey:

I) revolutionize our understanding of reionization’s spatial distribution, environments, and drivers at early stages by pioneering the detection of thousands of galaxies in the epoch of reionization (EoR, z=6-11),

II) identify hundreds of the rarest quiescent galaxies in the first 2 Gyr (z > 4) to place stringent constraints on the formation of the Universe’s most massive (M*>10^10Msun) galaxies, and

III) directly measure the evolution of the stellar mass to halo mass relation (SMHR) out to z~2.5 and its variance with galaxies' star formation histories and morphologies.

COSMOS-Web is designed to leave no stone unturned for deep, wide extragalactic surveys – eliminating cosmic variance and resulting in an order of magnitude more early Universe galaxies than all other Hubble+Webb surveys combined, thus significantly constraining the shape of the bright end of the UV luminosity function and mapping the early cosmic web. It will be the primary legacy dataset from Webb for the extragalactic community by providing quick public releases of multi-band, high-resolution near-IR imaging of half a million galaxies (and an unprecedented 32,000 in the mid-IR) thus enabling innumerable legacy science projects. Conducting this next level ambitious survey now is crucial given the finite lifetime of Webb and the need to plan swift follow-up of its unique discoveries.

OBSERVING DESCRIPTION

We propose a survey with contiguous 0.6 deg^2 coverage in 4 NIRCam filters (F115W+F150W in NIRCam-SW and F277W+F444W in NIRCam-LW) with 0.2 deg^2 coverage with MIRI (F770W) in parallel in the COSMOS equatorial field. Our mosaic consists of 189 visits with nearly uniform PA (within 1-2 degrees) and is schedulable in either April or December, which also maintains relatively low zodiacal background. The need for uniform PA is driven by the need to minimize edges and gaps within the roughly square mosaic.

Using the JWST ETC and the selected exposures for the 3TIGHTGAPS dithering/mosaic pattern, we estimate that our 5sigma point source sensitivities for our aggregate 774s exposure times in NIRCam would be: 27.36 (F115W), 27.59 (F150W), 28.05 (F277W), and 27.72 (F444W). The MIRI coverage will have three different depths depending on the number of exposures: 35% of MIRI coverage will have 2 exposure depth (500s) reaching 23.90 at 5sigma, 35% will have 4 exposure depth (1000s) reaching 24.27, and 30% will have 6 exposure depth (1500s) reaching 24.50. The MIRI data consists of nine non-contiguous stripes within the NIRCam mosaic.

Proposal 1727 - Observation 1 - COSMOS-Web: The JWST Cosmic Origins Survey

---

**Diagnostics**

- Diagnostic Status: Warning
- Observing Template: NIRCam Imaging
- Coordinated Parallel Template(s): MIRI Imaging

(Visit 1:1) Warning (Form): Overheads are provisional until the Visit Planner has been run.

(Visit 1:1) Informational (Form): Visit schedulable, but most scheduling windows are when JWST is pointed in direction of greatest micrometeoroid impact risk. This is likely due to scheduling special requirements.

### Proposal 1727 - Observation 15 - COSMOS-Web: The JWST Cosmic Origins Survey

**Diagnostic Status:** Warning

**Observing Template:** NIRCam Imaging

**Coordinated Parallel Template(s):** MIRI Imaging

---

**Warning (Form):** Overheads are provisional until the Visit Planner has been run.

**Informational (Form):** Visit schedulable, but most scheduling windows are when JWST is pointed in direction of greatest micrometeoroid impact risk. This is likely due to scheduling special requirements.

Special Requirements

Aperture PA Range 293 to 293 Degrees (V3 293.0713531 to 293.0713531)
No Parallel Attachments
Observation 40 - COSMOS-Web: The JWST Cosmic Origins Survey

### Observing Template
- **Name**: NIRCam Imaging
- **Coordinated Parallel Template(s)**: MIRI Imaging

### Diagnostic Status
- **Warning**: Overheads are provisional until the Visit Planner has been run.
- **Informational**: Visit schedulable, but most scheduling windows are when JWST is pointed in direction of greatest micrometeoroid impact risk. This is likely due to scheduling special requirements.

## Special Requirements

- Aperture PA Range 293 to 293 Degrees (V3 293.0713531 to 293.0713531)
- No Parallel Attachments
### Proposal 1727 - Observation 49 - COSMOS-Web: The JWST Cosmic Origins Survey

#### Diagnostic Status: Warning
- Observing Template: NIRCam Imaging
- Coordinated Parallel Template(s): MIRI Imaging

---

(Diagnostic Status: Warning (Form): Overheads are provisional until the Visit Planner has been run.
(Diagnostic Status: Informational (Form): Visit schedulable, but most scheduling windows are when JWST is pointed in direction of greatest micrometeoroid impact risk. This is likely due to scheduling special requirements.

---

## Proposal 1727 - Observation 61 - COSMOS-Web: The JWST Cosmic Origins Survey

**Diagnostic Status:** Warning

Observing Template: NIRCam Imaging

Coordinated Parallel Template(s): MIRI Imaging

### Diagnostics

(Visit 61:1) Warning (Form): Overheads are provisional until the Visit Planner has been run.

(Visit 61:1) Informational (Form): Visit schedulable, but most scheduling windows are when JWST is pointed in direction of greatest micrometeoroid impact risk. This is likely due to scheduling special requirements.

### Special Requirements

- Aperture PA Range 293 to 293 Degrees (V3 293.0713531 to 293.0713531)
- No Parallel Attachments
- Background Limited. Background no more than 10th percentile above minimum

---

*Proposal 1727 - Observation 69 - COSMOS-Web: The JWST Cosmic Origins Survey*
### Proposal 1727 - Observation 70 - COSMOS-Web: The JWST Cosmic Origins Survey

**Diagnostics**

- **Diagnostic Status:** Warning
- **Observing Template:** NIRCam Imaging
- **Coordinated Parallel Template(s):** MIRI Imaging

#### (Visit 70:1) Warning (Form): Overheads are provisional until the Visit Planner has been run.

#### (Visit 70:1) Informational (Form): Visit schedulable, but most scheduling windows are when JWST is pointed in direction of greatest micrometeoroid impact risk. This is likely due to scheduling special requirements.

Observation 34 - COSMOS-Web: The JWST Cosmic Origins Survey

### Diagnostic Status
- **Warning**

- **Observing Template:** NIRCam Imaging
- **Coordinated Parallel Template(s):** MIRI Imaging

### Overheads Warning
Overheads are provisional until the Visit Planner has been run.

### Informational Notice
Visit schedulable, but most scheduling windows are when JWST is pointed in direction of greatest micrometeoroid impact risk. This is likely due to scheduling special requirements.

**Proposal 1727 - Observation 156 - COSMOS-Web: The JWST Cosmic Origins Survey**

**Observation**
- **Proposal 1727, Observation 156: Visits 95 Repeat**
- **Diagnostic Status:** Warning
  - **Observing Template:** NIRCam Imaging
  - **Coordinated Parallel Template(s):** MIRI Imaging

**Diagnostics**
- **(Visit 156:1) Warning (Form):** Overheads are provisional until the Visit Planner has been run.
- **(Visit 156:1) Informational (Form):** Visit schedulable, but most scheduling windows are when JWST is pointed in direction of greatest micrometeoroid impact risk. This is likely due to scheduling special requirements.

### Proposal 1727 - Observation 119 - COSMOS-Web: The JWST Cosmic Origins Survey

#### DIAGNOSTICS

Observation 119

- Diagnostic Status: Warning
- Observing Template: NIRCam Imaging
- Coordinated Parallel Template(s): MIRI Imaging

- (Visit 119:1) Warning (Form): Overheads are provisional until the Visit Planner has been run.

### Special Requirements

- Aperture PA Range 107 to 107 Degrees (V3 107.0713531 to 107.0713531)
- No Parallel Attachments
- Background Limited. Background no more than 10th percentile above minimum
### Proposal 1727 - Observation 133 - COSMOS-Web: The JWST Cosmic Origins Survey

**Proposal 1727, Observation 133**

**Diagnostic Status:** Warning

- Observing Template: NIRCam Imaging
- Coordinated Parallel Template(s): MIRI Imaging

---

**Diagnostics**

(Visit 133:1) Warning (Form): Overheads are provisional until the Visit Planner has been run.
